Introduction

Welcome to the Barnahus App! This document will guide you through the onboarding process of the app. The app has been developed to facilitate the child's journey through Barnahus and ensure that the child receives appropriate information throughout their Barnahus Journey.

In this guide, we will alternate between the perspective of the **users** and that of **practitioners**. The **users** will be the children visiting the Barnahus and the **practitioners** will be the people working at Barnahus. The perspective of the **user** is what you can see once you've downloaded the app from App Store or Google Play Store. The practitioners have access to more aspects of the app for setting up the app's content through the Dashboard.

There are two different sections of the app, one interactive 3D section, and one section where you can visit your local Barnahus. This document will guide you through these two sections and clearly outline the intended purposes of each section.

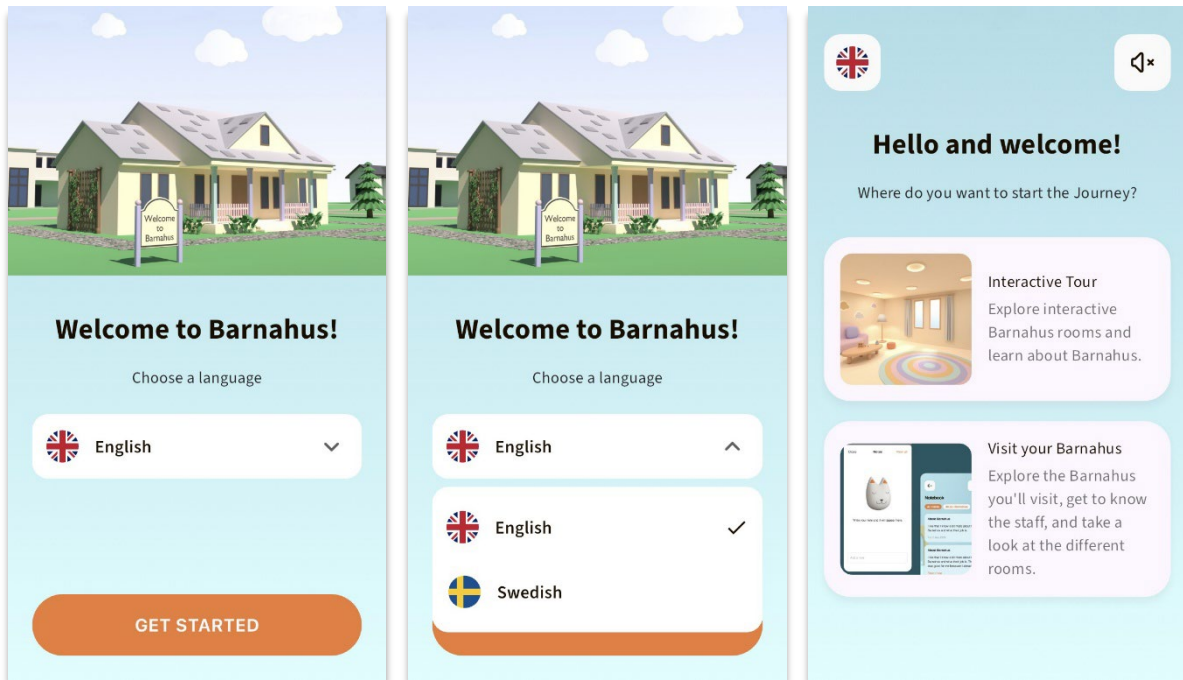

This document will also highlight the different roles we have created for **practitioners** in the Dashboard. Not all practitioners using the app will have the same responsibilities and tasks. We have created the following three roles:

- 1. Master Admin,**
- 2. Admin,** and
- 3. Practitioner.**

This document will carefully guide you through the different roles and delineate the differences.

We have structured this document in the following way. We will first show you how the app looks from the perspective of the user and then show you how practitioners can populate the app with pictures and text. We have structured the document in this way for educational purposes: We believe it is easier to understand the responsibilities and tasks of the different practitioners once you have seen what the app looks like from the perspective of the user. Terms like "Admin Dashboard" and "Customised Barnahus Journeys" are easier to understand once you've seen what they correspond to for the user.

User perspective (i.e. the child's view)

When entering the app as a user, you are presented with two options:

- A 3D interactive tour, and
- Visit your Barnahus

See the video walkthrough of the app here: <https://youtu.be/IC6ijj2PDpU>

Please note: We have used example texts and pictures for the video walkthrough of this app. These are just placeholders, and we do not expect you to use them. You will be able to use the pictures and the text you think are appropriate. We highly recommend you give careful thought to what information the children would need and what picture you would like to share.

3D Interactive tour

The 3D Interactive tour is open to the public and is the same for everyone **using** the app. You as a Barnahus professional cannot make any changes to this section.

The purpose of this section is to give children an overview of what a Barnahus is, what happens there and a brief introduction to the different rooms that may exist in a Barnahus. The Interactive tour provides a very general representation of Barnahus and its rooms.

There are two different 3D interactive tours of Barnahus, one for the age group 3–9 and the other for the age group 10–17. The only difference between the age groups is the design audience in terms of colours and shapes – the contents in the rooms are more or less the same.

In this section you can also find a meditation space, which provides the user with a simple breathing exercise.

Visit your Barnahus

“Visit your Barnahus” is a section that is created by staff from every Barnahus. This section shows the child their unique journey through your Barnahus and what is shown to the child in this section is entirely up to the Barnahus professionals.

The purpose of this section is to give a child a personal introduction to the Barnahus they will/are visiting, what rooms look like and learn about some of the staff that they will meet – with the aim of making the visit seem less scary.

Every Barnahus is responsible for providing content about their Barnahus in this section – this is done through the dashboard which we will go through further down in this document. It is important to note that there are no mandatory fields in this section – it is entirely up to the Barnahus professionals themselves to decide what they would like to include.

This section is restricted and protected by a username **and** password – only children who have been granted access can view the information about your Barnahus.

The child logs in to this section with a Custom ID, functioning as a username, and a one-time password – when the child has logged in for the first time using the one-time password, they are then prompted to change their password. The Custom ID is a code that the professional generates when they want to create a Custom Journey for a child (we will go through this in more detail in the user guide below).

In this section the child also has the opportunity to leave comments. The comments are only visible to them, but the Barnahus can disable this feature if they deem it inappropriate.

Dashboard user guide

Not all practitioners using the app will have the same responsibilities and tasks. We have created the following three roles:

Role	Main tasks
Master admin	Add Admins, practitioners, and content to the app, create custom journeys for children
Admin	Add Practitioners and content to the app, create custom journeys for children
Practitioner	Create custom journeys for children

This is due to privacy concerns, and some people might benefit from having access to the app, but not access to adjusting the content of the app. Another reason for dividing up the practitioner role into different roles is to divide up the labour efficiently between the different roles.

Master Admin Onboarding

You, as the Master Admin, are the first person to be invited to the dashboard. You are the main point of contact for that Barnahus.

Your role is to invite other contributors to the dashboard (Admins and Practitioners) and manage the content for the app – i.e. adding information and pictures about your Barnahus, the different rooms and staff. You also have the ability to create Custom Journeys for the children visiting your Barnahus.

You can manage all sections alone, but you can also invite other people to assist you in setting up the app. Adding an Admin grants them almost identical rights to yours, enabling them to assist with setting up content, adding practitioners and creating Custom Journeys for children. Adding a practitioner grants them limited rights to create Custom Journeys for children.

Accessing Your Barnahus Dashboard

1. Accept the invitation email and log in to your Barnahus dashboard
2. Familiarize yourself with the dashboard interface and available functionalities

Inviting Admins

Adding an Admin grants them almost identical rights to yours, enabling them to assist you with setting up the content for the app, adding practitioners and creating Custom Journeys for children.

See the video tutorial here: <https://www.youtube.com/watch?v=aS7IMhJMSiM>

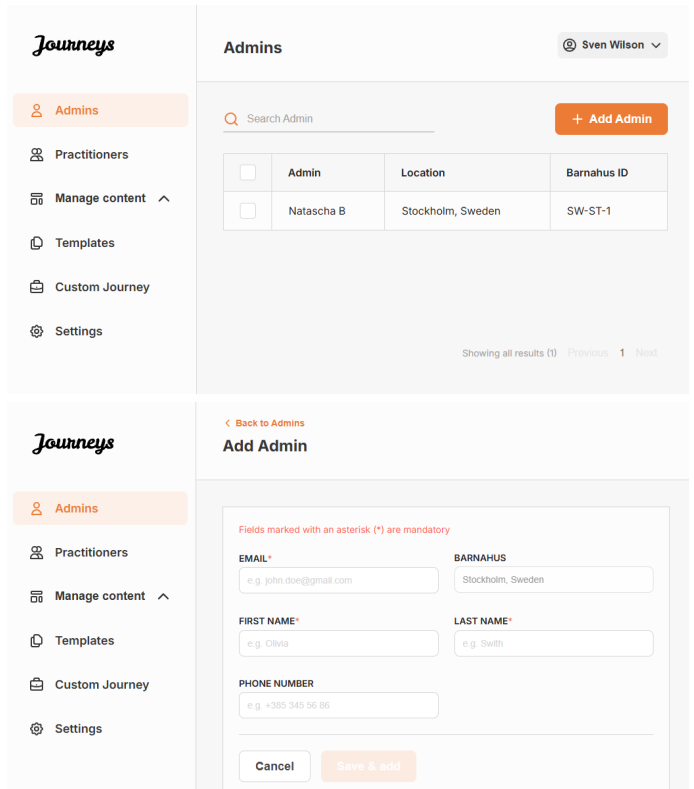

1. Navigate to the “Admins” section

2. Click “Add Admin”

3. Fill in the required details (email, first name, last name) for each Admin – adding a phone number is optional.

The Barnahus location is pre-determined and cannot be changed as you can only add admins to the Barnahus that you are assigned to.

4. Click “Save & Add” to send the invitation email to the Admin.

Inviting practitioners

Adding a practitioner grants them limited rights to create Custom Journeys for children, they are not able to add any new content but can use the content that has been set up by the Master Admin and the Admins.

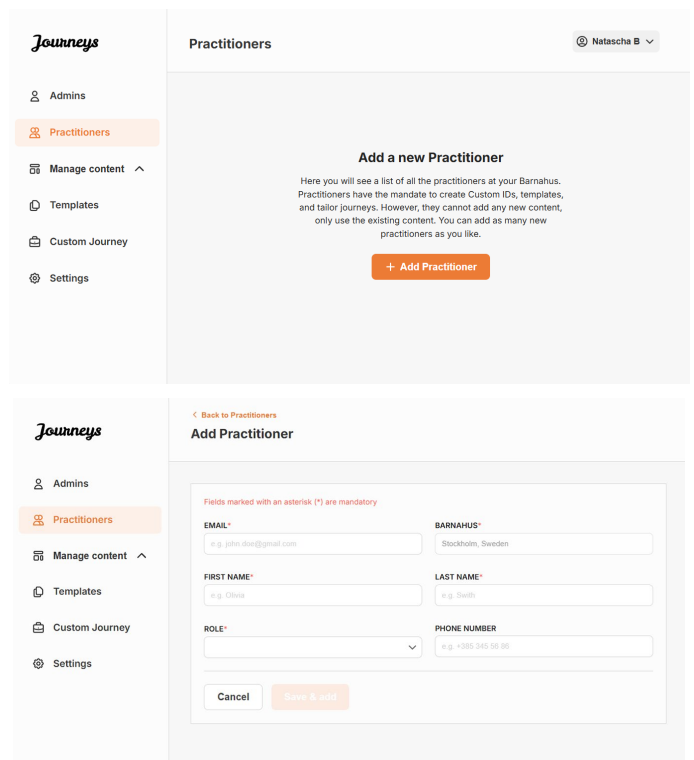

See the video tutorial here: <https://www.youtube.com/watch?v=aRSc2k0WnoE>

1. Navigate to the ‘Practitioners’ tab in the side menu.

2. Click “Add Practitioner”

3. Fill in the required details (email, first name, last name, role) for each Practitioner – adding a phone number is optional.

The Barnahus location is pre-determined and cannot be changed as you can only add practitioners to the Barnahus that you are assigned to.

4. Click “Save & add” to send the invitation email to the Practitioner.

Setting Up App Content

Populating the content of the app is one of your main responsibilities, including adding information and pictures about your Barnahus, the different rooms and staff tailored for different levels of maturity.

When you have added the content, you can preview how it will look in the app before publishing it. You only need to upload the content in the desired language once, as the content added here will be the same for every child, i.e. general information that does not need to be changed for every child. If you wish to do so, you can add multiple versions of the same content (e.g. languages or age relative – easier or more elaborate text).

See the video tutorial here: https://www.youtube.com/watch?v=OD_NdT_fcME

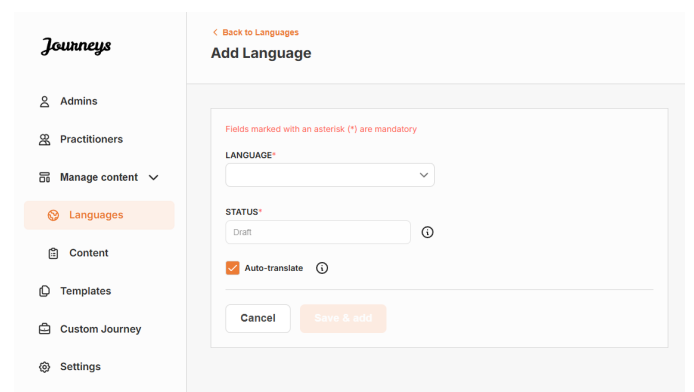

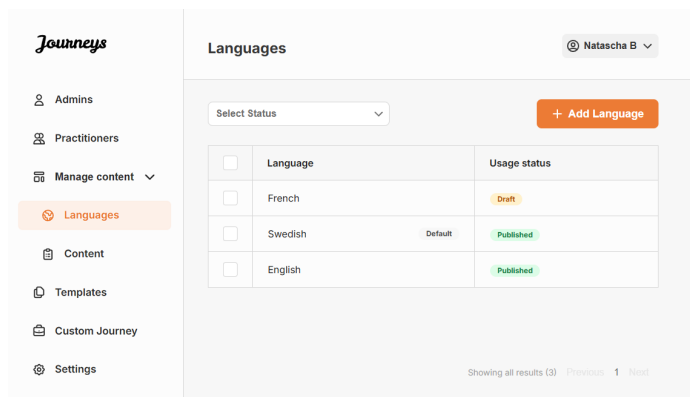

Add languages

To set up the content about your Barnahus, you first need to add the languages that you would like to add content in. You do this in the ‘Languages’ tab under ‘Manage content’.

After clicking ‘Add language’, you need to search for the language that you would like to add and enable/disable auto-translation for the selected language.

Auto-translate disabled: Having the auto-translate disabled adds the language to the dashboard as a default language – this language will serve as the basis for every other translation.

Auto-translate enabled: Having the auto-translate enabled means that the content that you add in the default language, can be auto-translated to this other language through Google Translate.

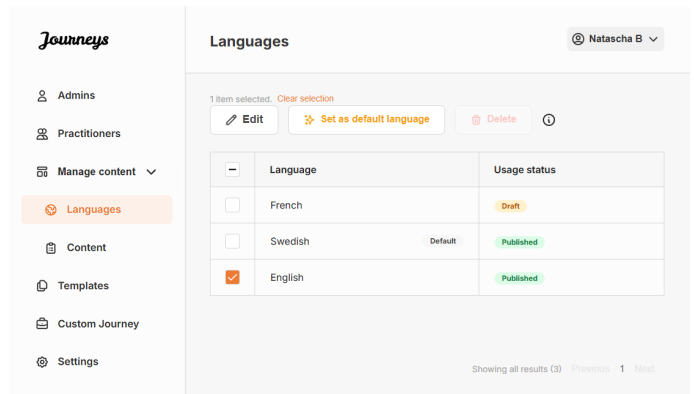

You can add as many languages as you’d like – you do not need to add all languages at once, you can always come back and add more later. We recommend that you start by just adding the default language.

The usage status in the overview showcases whether or not you have published any content in the different languages. **Draft** indicates that you have not yet published content in that specific language, whereas **Published** indicates that content has been published in that language.

If you want to change the default language, simply select the language and click “Set as default language”.

When selecting the language, you can also delete or edit it. **Note:** *You are not able to delete a default language or if the language has any Custom Journeys connected to it.*

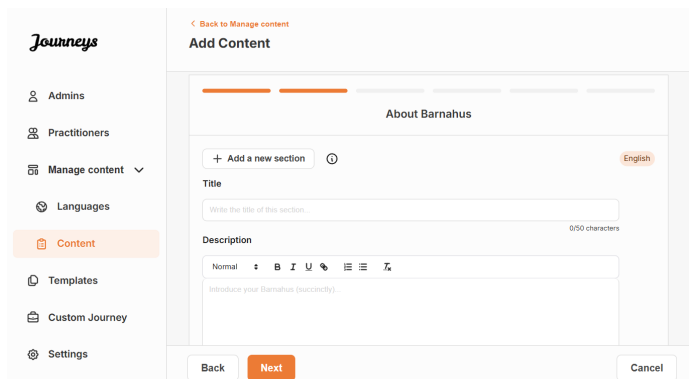

Add content in default language

1. After you have added your default language, navigate to the ‘Content’ tab under ‘Manage content’. Select the language that you have chosen as your default language in the drop-down menu and click “+ Add Content”.

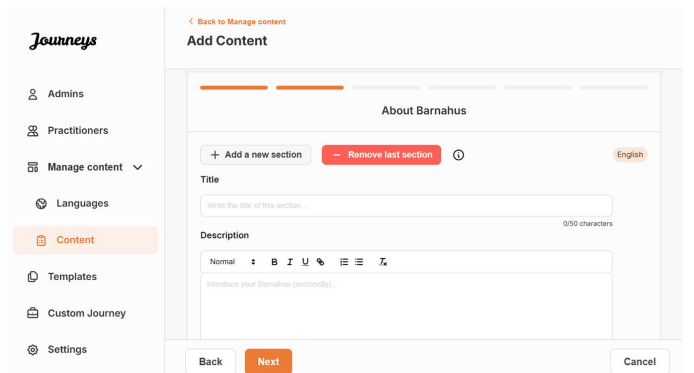

2. It’s important to add the content in the order that you’d like to show it in the app, once content has been added the order cannot be changed without deleting all the content and starting over.

- a. **About Barnahus:** Under ‘About Barnahus’ you will be asked to fill out information about your Barnahus that would be helpful for the child. *Keep in mind that this will be the same for all the children, so keep it generic but helpful.*

You can add multiple versions of ‘About your Barnahus’ in case you want to have different versions of the text tailored to different age groups. You can also add additional sections about what the child can expect during a visit, and what usually happens/can happen after the visit.

To add more versions of your text or additional sections, click on “+ Add a new section” – and a new section will appear below the previous one (containing title, description, audio transcript, and photo as well). If you want to remove an additional section, click on “Remove last section” and it will remove the latest section that was added.

Examples of what you can write:

“About your Barnahus”

Barnahus is a safe and child-friendly place where children who are presumed victims of violence receive the support they need. At Barnahus, law enforcement, social services, physical health and mental health staff work together under one roof. By bringing the professions together and integrating how they work, children don't have to repeat their stories many times.

“What the child can expect”

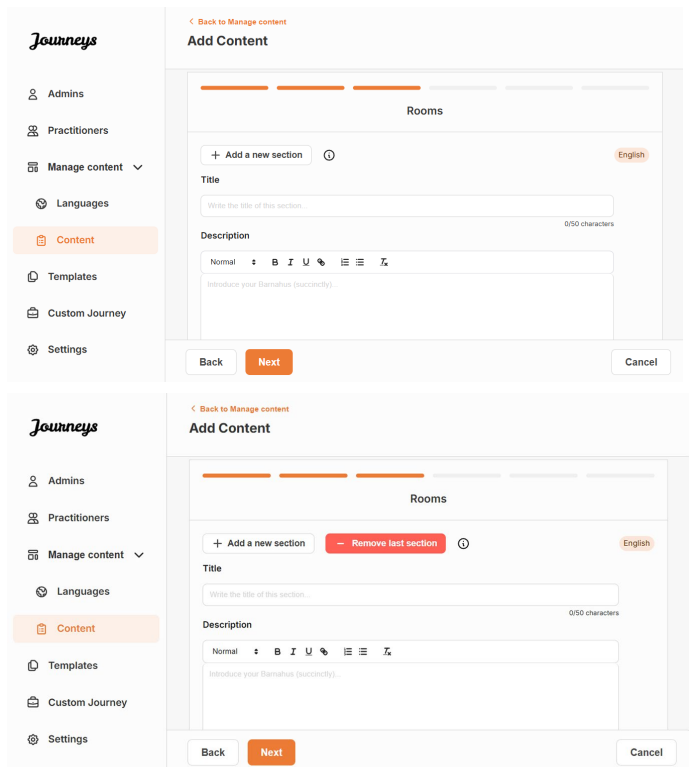

At Barnahus, you will meet professionals from law enforcement, social services, physical health and mental health, that will provide you support throughout the day.

“What happens after the visit”

After your visit to Barnahus, you'll receive ongoing support focused on helping you feel your best.

- b. Rooms:** Under 'Rooms' you will be asked to fill out information about the different rooms in your Barnahus and what usually happens in these different rooms, as well as add photos of the rooms if you'd like. *Keep in mind that this will be the same for all the children, so keep it generic but helpful.*

To add more rooms or if you want to have different versions of the text tailored to different age groups, simply click on “+ Add a new section” and a new section will appear below the previous one (containing title, description, audio transcript, and photo as well). If you want to remove an additional section, click on “Remove last section” and it will remove the latest section that was added.

Examples of what you can write:

“Waiting room”

You wait in this soothing environment until an adult comes to take you to the next step in your appointment. There will be toys to play with and books to read. You can ask the people who work there any questions you have about your visit.

“Interview room”

In the interview room, you will talk with a professional who has a lot of experience in talking and listening to young people who may have been mistreated. They will give you instructions and ask questions. You can ask questions if you want, too. Your conversation will be recorded using cameras and microphones. This is so you don't have to be interviewed many times, and to ensure that everything is done correctly.

“Examination room”

Here, you can meet a medical professional who will ensure that your health is OK and that you are feeling well. They will tell you what they would like to check, and you will say if it is OK or not. The room looks a lot like a doctor's office, with tools and an examination table.

- c. Staff:** Under 'Staff' you will be asked to fill out information about the staff at the Barnahus.

You can add as many 'Staff' as you want. To add more staff simply click on "+ Add a new section" and a new section will appear below the previous one (with the option to add photo, staff name, staff role and a description). *Keep in mind that you will need consent from the staff in question to add a photo of them and how they would like to show their name.*

If you want to remove an additional section, click on "Remove last section" and it will remove the latest section that was added.

What you can write:

In the description for the staff, you can add anything that could be interesting for a child to know; this can be favourite foods, hobbies, talents and so on. Anything that would humanise the staff for a child that may be scared about meeting new adults.

Note: As there is no easy way to distinguish between the content if you have added different versions of the same text by adding additional sections (e.g. text tailored to different age groups) – we recommend that you have a system in place to aid you in distinguishing between the different versions. This could be that you always add the content in a certain order (for example content for the younger age group is always added first and older age group second, or if you include something distinguishing in the text itself (for example using smileys for one age group but not the other, bolding something in the first version but not the second)

3. Preview the content before publishing it to see how it will look in the mobile app, and if you're satisfied – click on publish.

4. Once you have published content in the default language, you can create auto-translated content in another language based on the information that you have just provided (more about this under "[Add content in an auto-translated language](#)" below).

5. You can always add additional sections later, for example if you hire new staff and want to add them to the content. To do this, choose the heading that you would like to add a new section to (About, Room or Staff), and click on +Add About Barnahus/Room/Staff in the top right corner.

6. To edit already added content simply select the section you want to edit by marking the box – and then click "Edit" in the top right corner.

Note if you have added more than one language in the dashboard: When you add new content later on, or edit already added content - you will have to review the edited/newly added content in all languages that you have added before you can publish the content, This to ensure that the new content is published in all languages.

7. To delete already added content select the section you want to delete by marking the box – and then click “Delete” in the top right corner.

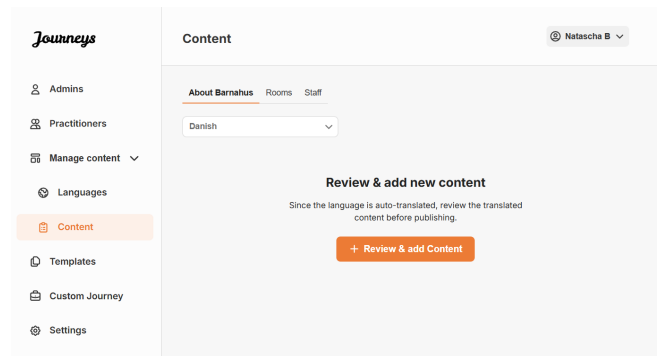

Add content in an auto-translated language

1. Once you have added content in the default language you can go back to the languages tab and add other languages with auto-translation enabled. The auto-translation is generated by Google and needs to be manually checked for mistakes before publishing.

2. Navigate to the ‘Content’ tab under ‘Manage content’ and in the drop-down menu, select the language that you would like to add auto-translated content in.

3. When you click ‘Review & add Content’ you will be shown the auto-translated version of the content that you added in the default language.

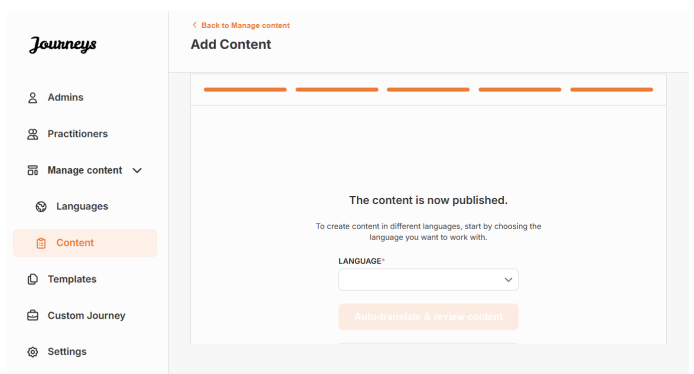

Go through the translation and make changes where necessary.

4. Preview how the content will look in the app and publish.

5. Once you have published the translated content, you can choose to review another auto-translated language.

Anytime you update the content or add additional content in the default language, you will have to review the new content in all languages in order to publish the content to ensure that the new content is published in all languages.

Creating templates

To streamline the process of designing a custom journey for a child, you can create templates using the content you have added. Templates serve as a starting point, simplifying the creation of custom journeys – you can use the created templates as many times as you'd like.

After a template is created, it can be used to build a custom journey for the child and make further adjustments as needed. This flexible approach ensures that the journey meets the unique needs of the child, while also saving time during the planning process.

Example:

If you've added additional versions of your text tailored to different age groups – e.g. 3–9 years and 10–17 years – you can create separate templates for each group. For instance, you might create a template containing all the text designed for the younger age group.

Additionally, if there are typical cases in your Barnahus where only certain rooms are visited, you can create a template that only includes those rooms, rather than all available rooms.

Another example of how you can use templates is if you'd like to provide the same informative journey to multiple children showing all the rooms and staff in your Barnahus. In this instance, you can create a so-called generic template – or two if you have provided text for different age groups. We will go through how to create a journey that can be shared with multiple children under the heading "[Create a Journey to be shared with multiple children](#)".

See the video tutorial here: <https://www.youtube.com/watch?v=80W1ei88Cjc>

1. Navigate to the "Templates" tab in the side menu
2. Click on "Create template" – Please note that you cannot create a template before you have added content about your Barnahus

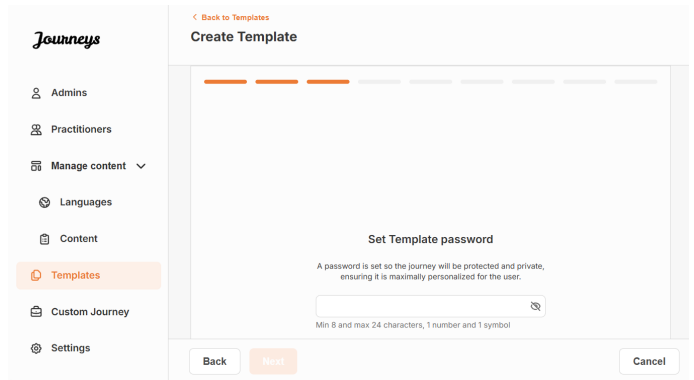

3. Name your template.

We recommend naming it something that is easily identifiable for other practitioners in your Barnahus as well (e.g. "3–9 Y/O Barnahus Journey", "10–17 Y/O Journey without Examination room" etc.)

4. Select whether or not the template will be used to create generic journeys.

Generic journeys are journeys that aren't tailored to a specific child and can be shared with multiple children. For example, if you want to create a general introduction to your Barnahus – showcasing everything the Barnahus has to offer.

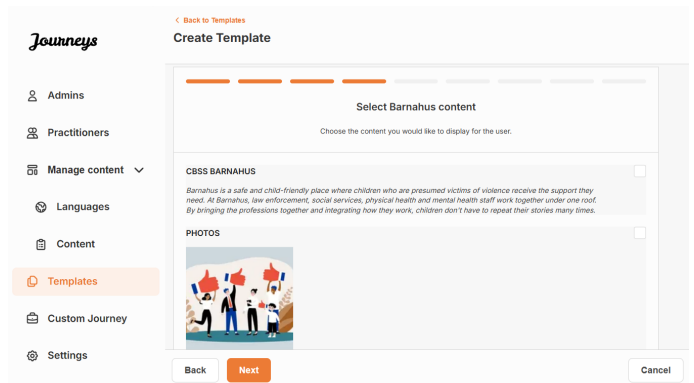

- **If you select NO:** Please proceed to the next step in this guide.
- **If you select YES:** Create an appropriate password for this template. This password will later be used by the children to access the generic journey in the app.

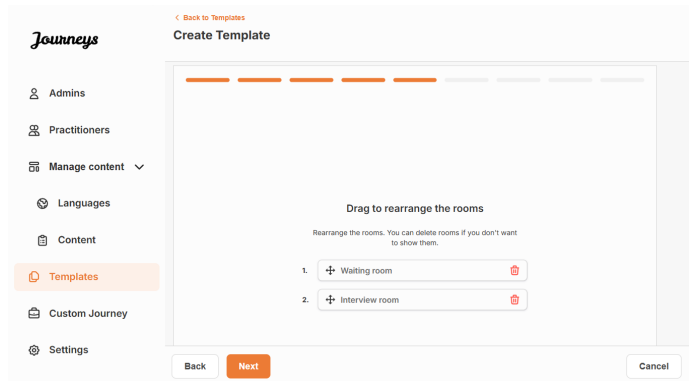

See more about how to create a generic journey under the heading [“Create a Journey to be shared with multiple children”](#).

5. Select the content that you would like to include in this template – all content you have added in the previous steps will be shown to you at once, it’s important to have a clear system to distinguish between different versions of the same content.

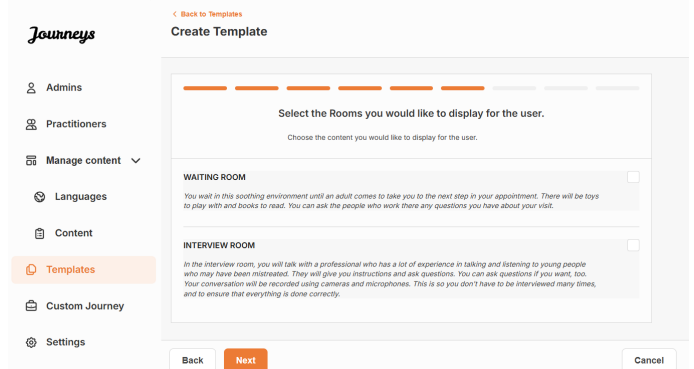

- Select the content that you would like to include about your Barnahus by clicking the boxes of the content that you would like to include in the template.

- Select the order you would like to showcase the rooms or if you want to remove one of the rooms for this template.

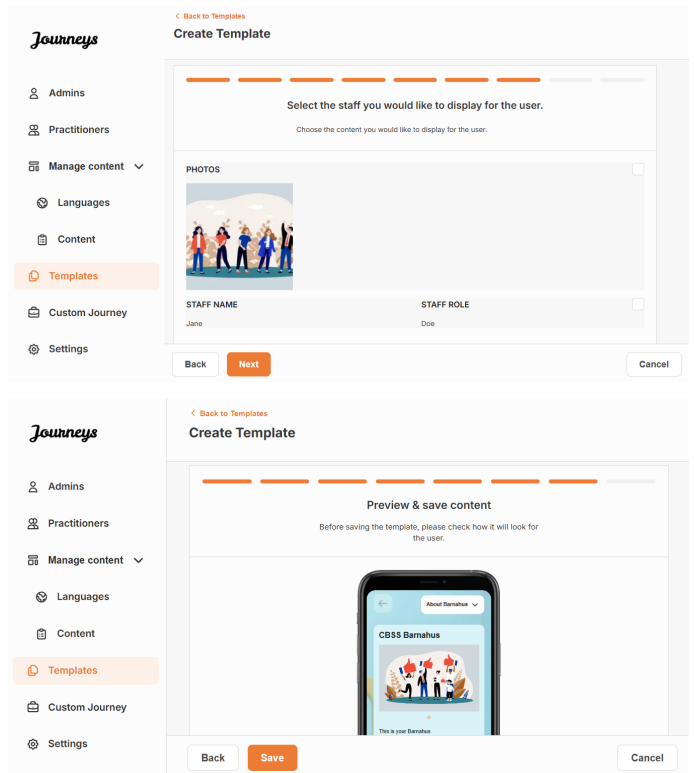

- Select the content that you would like to include about the rooms by clicking the boxes of the content that you would like to include in the template.

- d. Select the content that you would like to include about the staff by clicking the boxes of the content that you would like to include in the template.

6. Preview your template and save.

You can create as many templates as you want.

Creating a Custom Journey for a child

In order to create a custom journey for a child, you first create a unique Custom ID that you will link the journey that you want to create to. The Custom ID also serves as a username for the child to access their custom journey in the app.

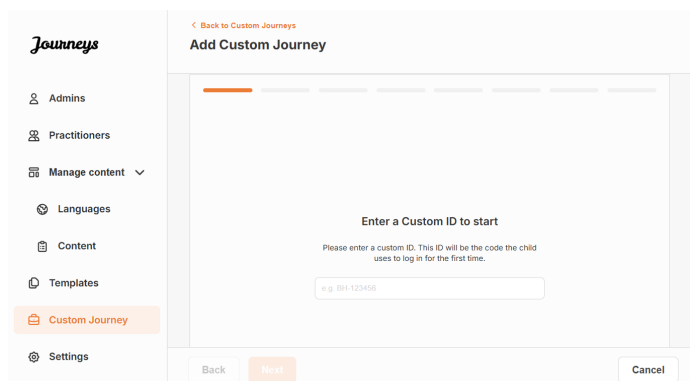

When creating a Custom Journey for a child you can rearrange the rooms, and tailor the language and the content you want to show to the child. The child will then be able to access their Custom Journey in the app on a mobile/tablet by entering the Custom ID and a password.

See the video tutorial here: <https://www.youtube.com/watch?v=evQyQOlvPdY>

1. Navigate to the “Custom Journey” tab in the side menu.

2. Select “Add Custom Journey”

3. Come up with a distinct/identifiable but appropriate Custom ID for the child that you want to create a personalised journey for. This Custom ID will serve as a username for the child in the app.

4. Enable/disable notes depending on the local/national context and the case itself (see section 3.5 in “[The Journeys App: What to keep in mind when using the app](#)”) – this can be enabled/disabled at any time.

The screenshot shows the 'Add Custom Journey' screen in the Journeys app. On the left is a navigation menu with options: Admins, Practitioners, Manage content, Languages, Content, Templates, Custom Journey (highlighted), and Settings. The main content area is titled 'Add Custom Journey' and has a sub-header '< Back to Custom Journeys'. Below this is a section titled 'Enable notes' with the text: 'Turning on notes allows the child to add comments about their journey... If you want to disable them later, you can do that as well.' There are two radio buttons: 'Enable notes' and 'Disable notes'. At the bottom are 'Back', 'Next', and 'Cancel' buttons.

5. Select the language you would like to create the Custom Journey in.

The screenshot shows the 'Add Custom Journey' screen in the Journeys app. On the left is a navigation menu with options: Admins, Practitioners, Manage content, Languages, Content, Templates, Custom Journey (highlighted), and Settings. The main content area is titled 'Add Custom Journey' and has a sub-header '< Back to Custom Journeys'. Below this is a section titled 'Select language' with the text: 'Choose the language you will use to write the content.' There is a dropdown menu. At the bottom are 'Back', 'Next', and 'Cancel' buttons.

6. Select if you'd like to create the journey from a template or if you'd like to create it manually from scratch.

The screenshot shows the 'Add Custom Journey' screen in the Journeys app. On the left is a navigation menu with options: Admins, Practitioners, Manage content, Languages, Content, Templates, Custom Journey (highlighted), and Settings. The main content area is titled 'Add Custom Journey' and has a sub-header '< Back to Custom Journeys'. Below this is a section titled 'Choose your way of creating Custom Journey' with the text: 'You can either create a Custom Journey from a template, which includes pre-selected data from content, or custom Custom Journey from the full content.' There are two radio buttons: 'Create from template' and 'Create a Journey manually'. At the bottom are 'Back', 'Next', and 'Cancel' buttons.

Create a Custom Journey from a template

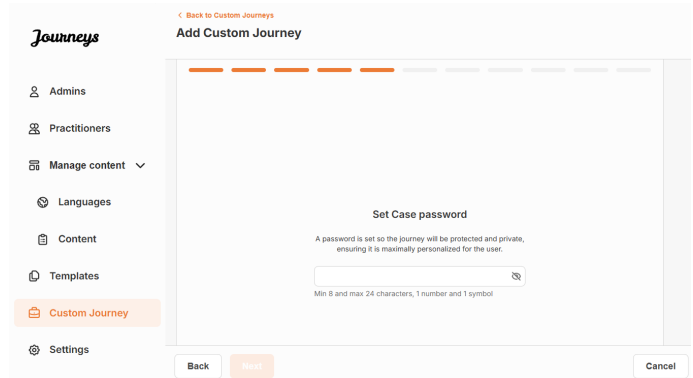

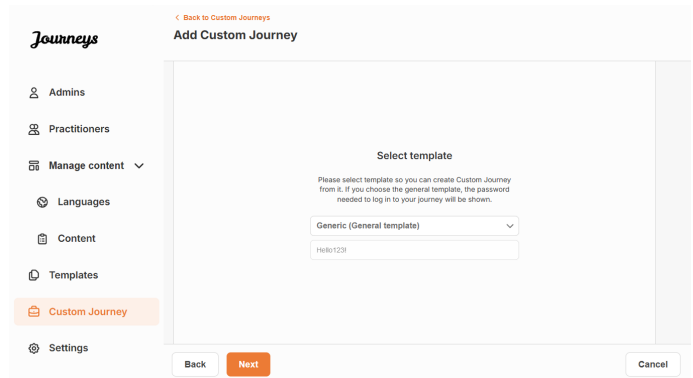

If you've created a template, you can choose "Create from template" when you're creating a Custom Journey. This will automatically create the journey for you.

1. Select the template that you would like to use in the dropdown menu.

The screenshot shows the 'Add Custom Journey' screen in the Journeys app. On the left is a navigation menu with options: Admins, Practitioners, Manage content, Languages, Content, Templates, Custom Journey (highlighted), and Settings. The main content area is titled 'Add Custom Journey' and has a sub-header '< Back to Custom Journeys'. Below this is a section titled 'Select template' with the text: 'Please select template so you can create Custom Journey from it. If you choose the general template, the password needed to log in to your journey will be shown.' There is a search bar with a magnifying glass icon and the text 'Search Template'. Below the search bar are two template options: 'Generic: (General template)' and '9-17 who waiting room'. At the bottom are 'Back', 'Next', and 'Cancel' buttons.

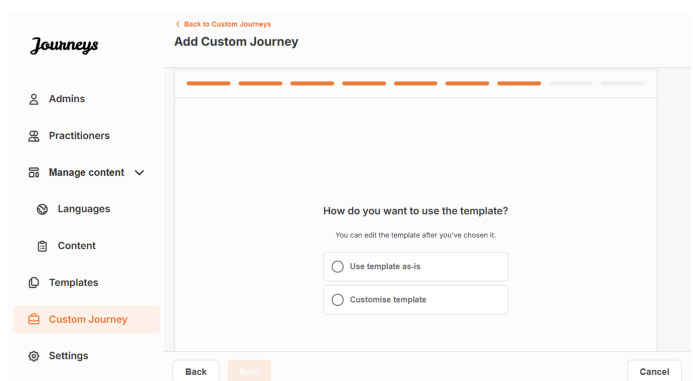

2. If you select a *general template* (i.e. a template that will be used for generic journeys) the password for the Journey will be shown to you once you've selected the template.

If you select a template that is not a general template, you will be asked to create a one-time password for the Custom Journey. When the child has logged in for the first time with the one-time password, they will be prompted to change their password.

Tip! For ease you can make the one-time password the same as the Custom ID (as long as it meets the requirements)– since the child will be prompted to change the password once they have logged in for the first time.

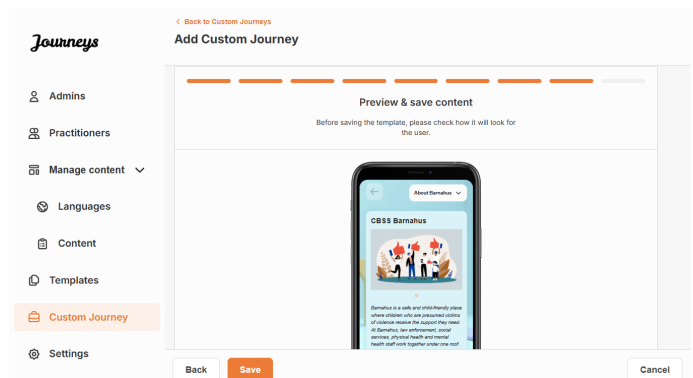

3. Choose if you'd like to use the template as is (“Use template as-is”), or if you want to customise it further (“Customise template”).

Use template as-is:

If you choose to use a template as-is you are automatically redirected to the last step to preview and save the Custom Journey – all information about the Barnahus, rooms and staff will be shown as it is in the template.

Share the Custom ID (which serves as a username) and the one-time password with the child for them to be able to access their tailored journey on the mobile app.

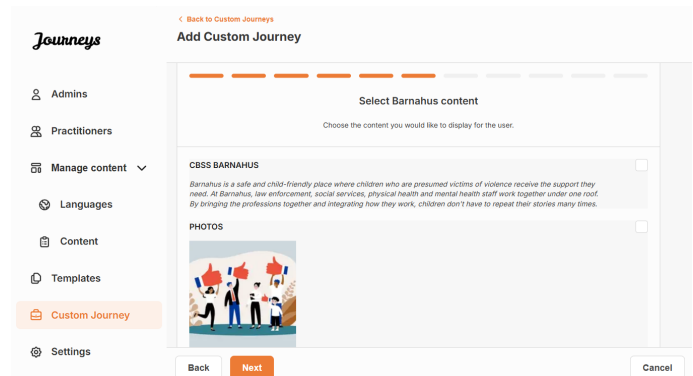

Customise template:

If you choose to customise the template, you are able to further limit what is shown to the child. For example, if you know that the child will not meet certain staff during their Barnahus visit, you can customise the template for this journey to not show that staff.

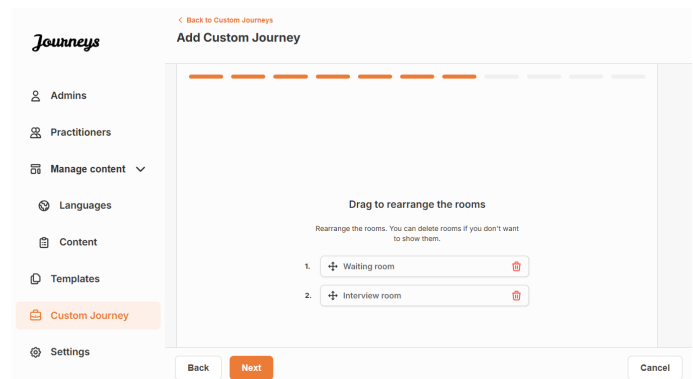

Please note that you cannot add more information than is included in the template, only narrow it further.

1. Select the content from the template that you would like to include in this Custom Journey.

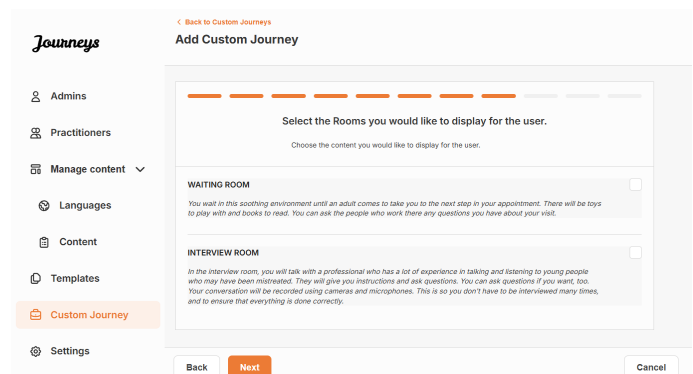

- a. Select the content that you would like to include about your Barnahus in this Custom Journey by clicking the boxes of the content that you would like to include from the template.

- b. Select the order you would like to showcase the rooms or if you want to remove one of the rooms from the Custom Journey.

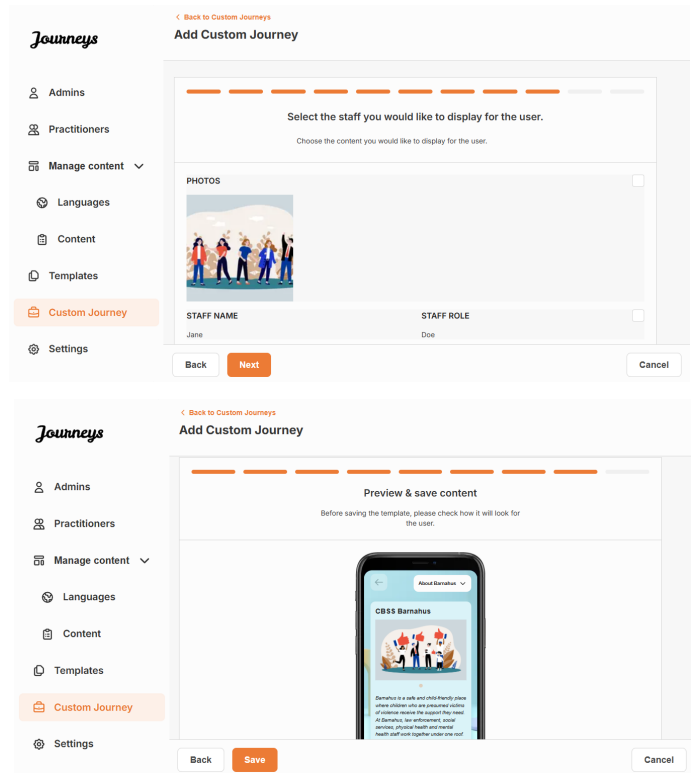

- c. Select the content that you would like to include about the rooms in this Custom Journey by clicking the boxes of the content that you would like to include.

- d. Select the content that you would like to include about the staff in this Custom Journey by clicking the boxes of the content that you would like to include.

2. Preview and save.

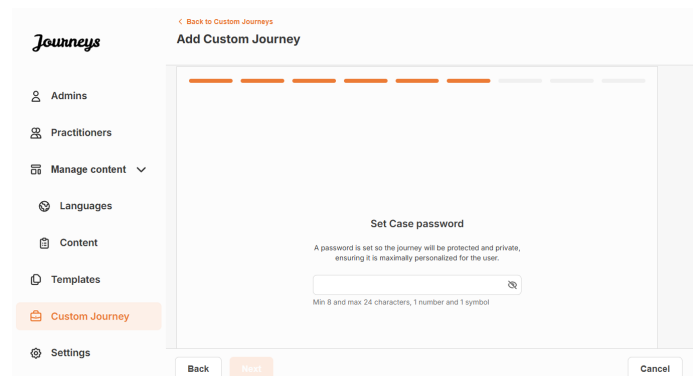

Share the Custom ID (which serves as a username) and the one-time password with the child for them to be able to access their Custom Journey on the mobile app.

Create Custom Journey manually from scratch (“Create a Journey manually”)

Creating a Custom Journey from scratch follows the same process as when you are creating a template. You are presented with all the information that was added when setting up the content for the app, and you pick and choose what rooms, staff, and information you would like to include in the journey.

Again, it is important to have a clear system to distinguish between different versions of the same content.

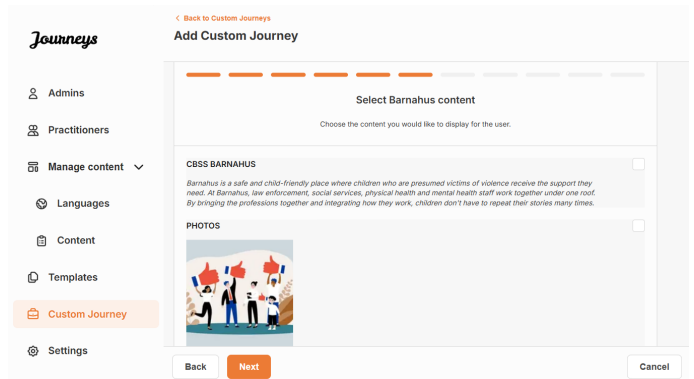

1. Create a one-time password for the Custom Journey. This password will serve as a one-time passcode for the child to access their journey in the app – after the child has logged in for the first time, they will be prompted to change their password.

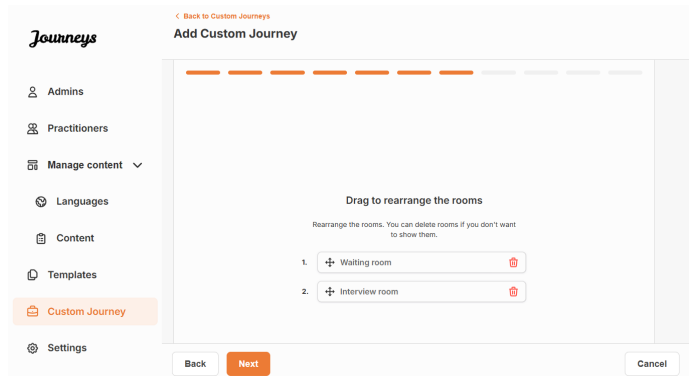

Tip! For ease you can make the one-time password the same as the Custom ID (as long as it meets the requirements) – since the child will be prompted to change the password once they have logged in for the first time.

2. Select the content that you would like to include in this journey:

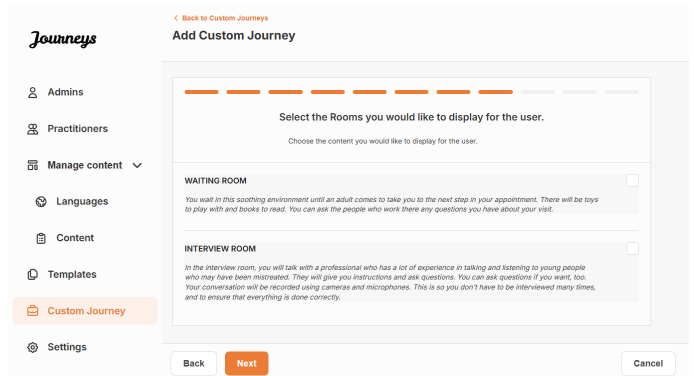

a. Select the content that you would like to include about your Barnahus by clicking the boxes of the content that you would like to include in the Custom Journey.

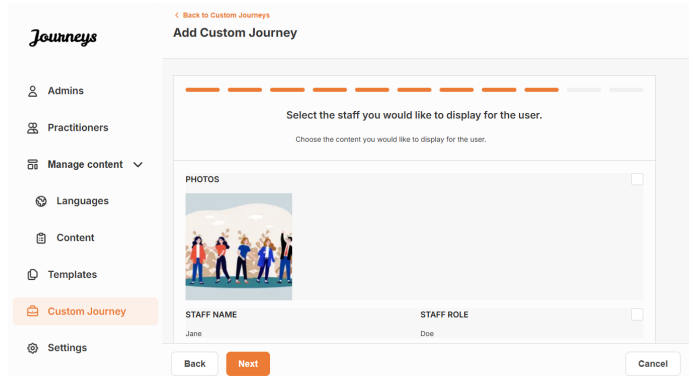

b. Select the order you would like to showcase the rooms or if you want to remove one of the rooms for this journey.

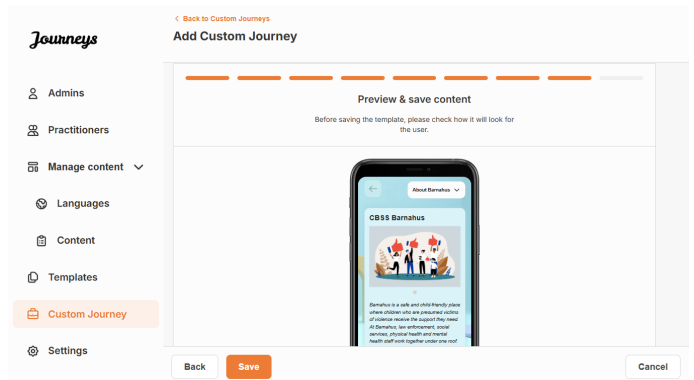

c. Select the content that you would like to include about the rooms by clicking the boxes of the content that you would like to include.

d. Select the content that you would like to include about the staff by clicking the boxes of the content that you would like to include.

3. Preview the Custom Journey and save.

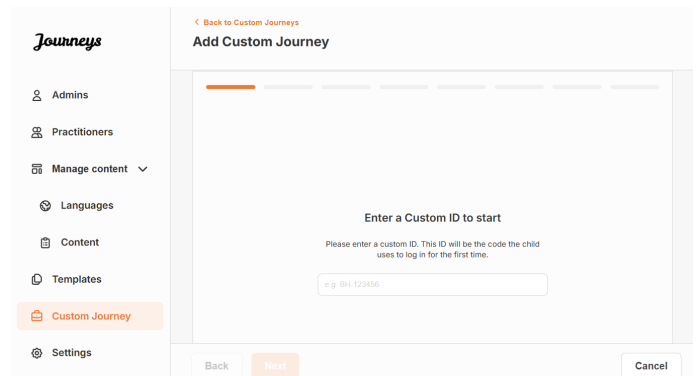

Share the Custom ID (which serves as a username) and the one-time password with the child for them to be able to access their tailored journey on the mobile app.

Create a Journey to be shared with multiple children

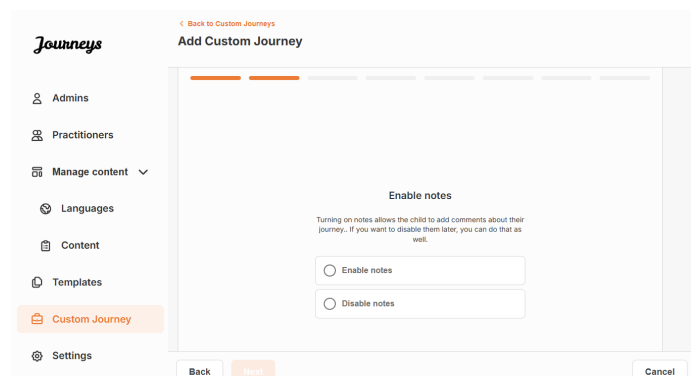

In order to create a Journey that can be shared with multiple children, you simply need to create a Custom Journey with notes disabled from one of the so-called general templates that you have created earlier.

1. Navigate to the "Custom Journey" tab in the side menu.

2. Select "Add Custom Journey"

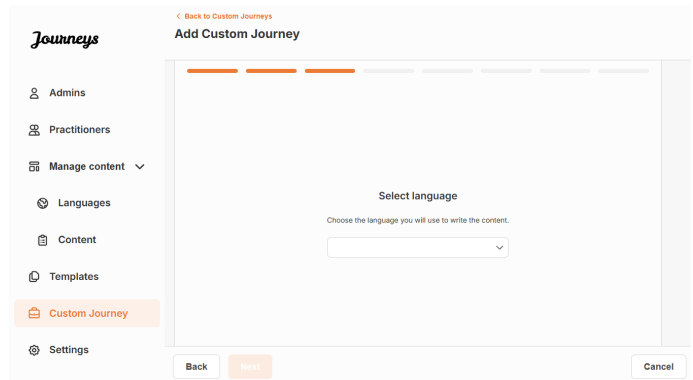

3. Come up with a distinct/identifiable but appropriate Custom ID for the journey. This Custom ID will serve as a username for the child in the app.

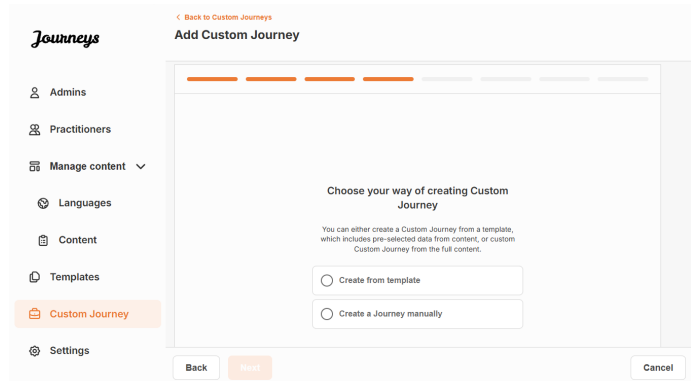

4. Disable notes.

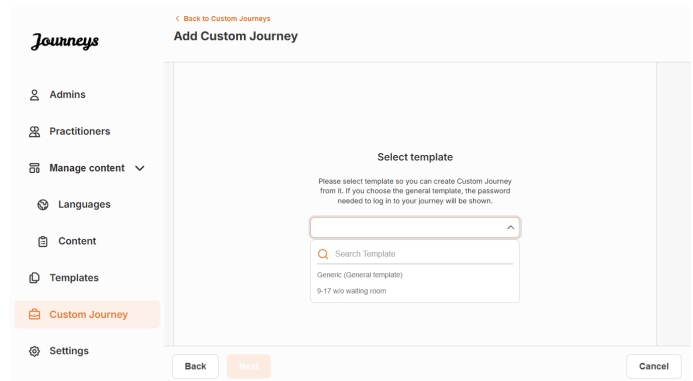

5. Select the language you would like to create the Custom Journey in.

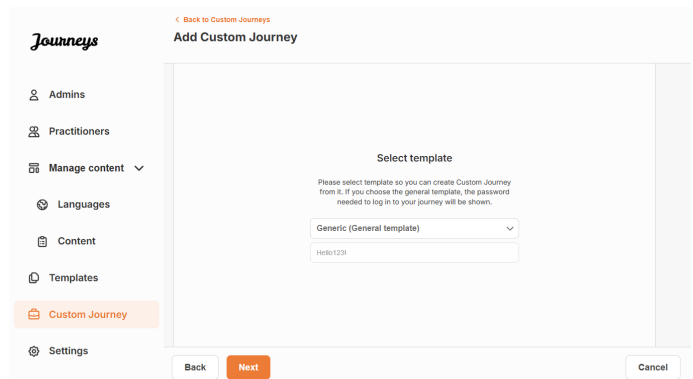

6. Select 'Create from template'

7. Select the general template that you have created – general templates are easily distinguished from other templates as they are marked with '(general template)'

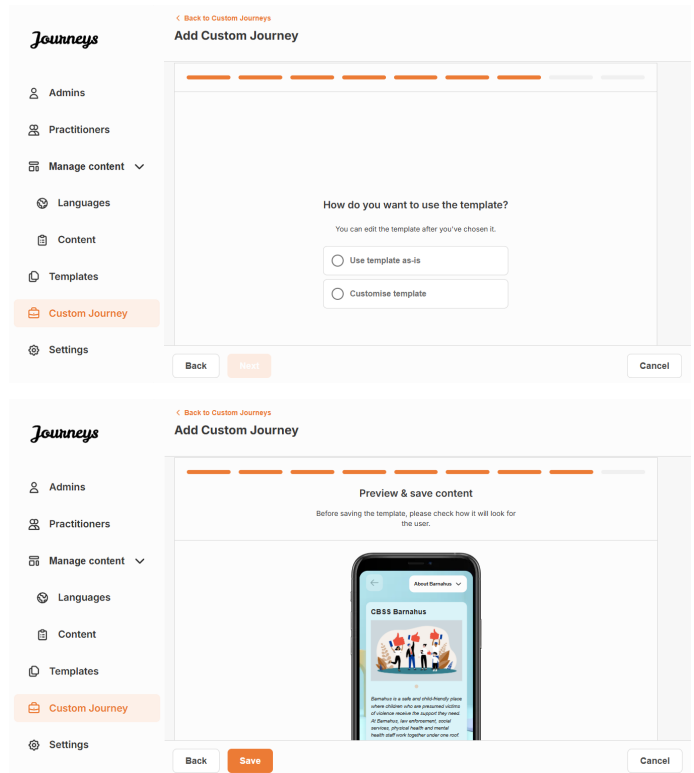

The password for the Journey will be shown to you once you've selected the template.

8. Select "Use template as-is".

You will be automatically redirected to the last step to preview and save the Custom Journey – all information about the Barnahus, rooms and staff will be shown as it is in the template.

Share the Custom ID (which serves as a username) and the password with the child for them to be able to access the generic journey on the mobile app.

Admin Onboarding

The Admin is added to the dashboard by the Master Admin.

Your role is to invite other contributors to the dashboard (Practitioners) and manage the content for the app – i.e. adding information and pictures about your Barnahus, the different rooms and staff. You also have the ability to create custom IDs and custom journeys for the children visiting your Barnahus.

Adding a practitioner grants them limited rights to create Custom IDs, templates, and custom journeys for children.

Accessing Your Admin Dashboard

1. Accept the invitation email and log in to your Admin dashboard.
2. Familiarise yourself with the dashboard interface and available functionalities.

Inviting Practitioners

Adding a practitioner grants them limited rights to create Custom Journeys for children, they are not able to add any new content but can use the content that has been set up by the Master Admin and the Admins.

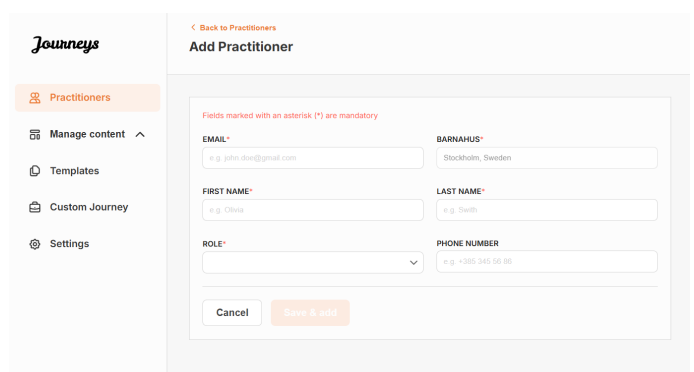

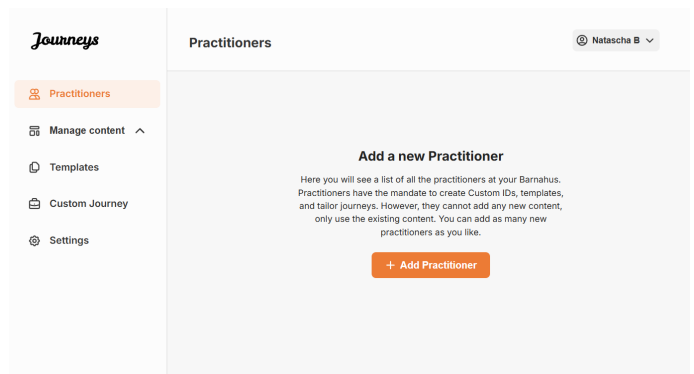

See the video tutorial here: <https://www.youtube.com/watch?v=aRSc2k0WnoE>

1. Navigate to the 'Practitioners' tab in the side menu.

2. Click "Add Practitioner"

3. Fill in the required details (email, first name, last name, role) for each Practitioner – adding a phone number is optional.

The Barnahus location is pre-determined and cannot be changed as you can only add practitioners to the Barnahus that you are assigned to.

4. Click "Save & add" to send the invitation email to the Practitioner.

Setting Up App Content

Populating the content of the app is one of your main responsibilities, including adding information and pictures about your Barnahus, the different rooms and staff tailored for different levels of maturity.

When you have added the content, you can preview how it will look in the app before publishing it. You only need to upload the content in the desired language once, as the content added here will be the same for every child, i.e. general information that does not need to be changed for every child. If you wish to do so, you can add multiple versions of the same content (e.g. languages or age relative – easier or more elaborate text).

See the video tutorial here: https://www.youtube.com/watch?v=OD_NdT_fcME

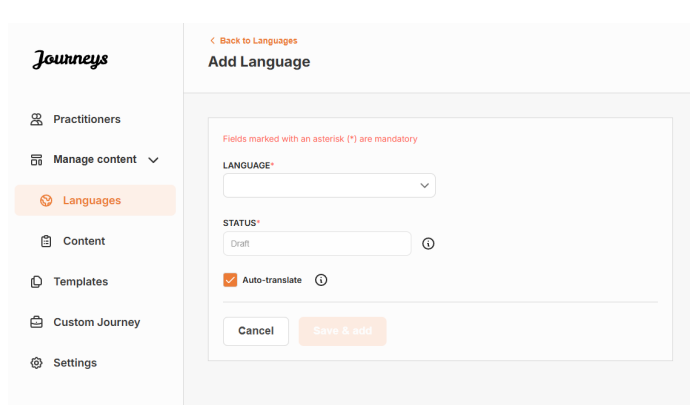

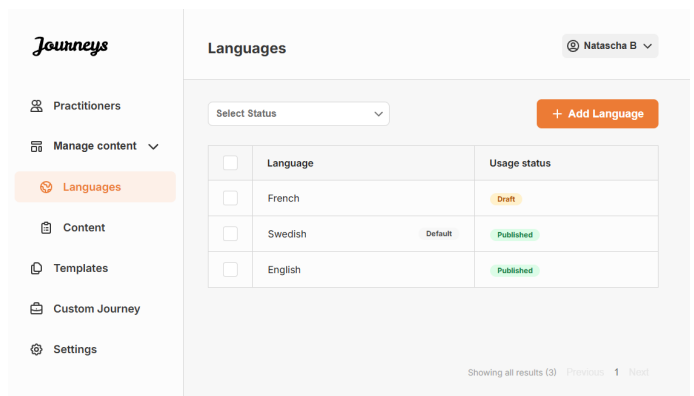

Add languages

To set up the content about your Barnahus, you first need to add the languages that you would like to add content in. You do this in the 'Languages' tab under 'Manage content'.

After clicking 'Add language', you need to search for the language that you would like to add and enable/disable auto-translation for the selected language.

Auto-translate disabled: Having the auto-translate disabled adds the language to the dashboard as a default language – this language will serve as the basis for every other translation.

Auto-translate enabled: Having the auto-translate enabled means that the content that you add in the default language, can be auto-translated to this other language through Google Translate.

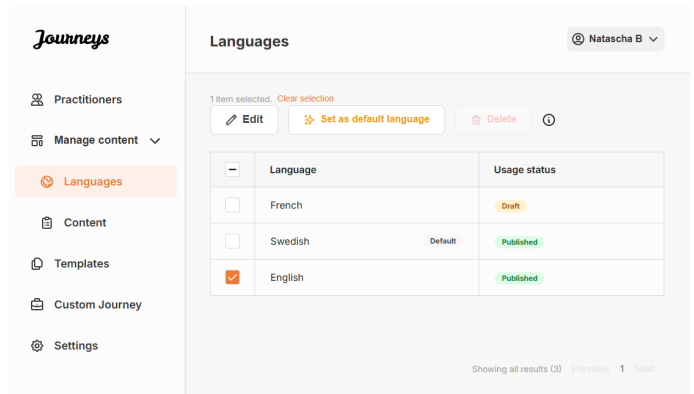

You can add as many languages as you'd like – you do not need to add all languages at once, you can always come back and add more later. We recommend that you start by just adding the default language.

The usage status in the overview showcases whether or not you have published any content in the different languages. **Draft** indicates that you have not yet published content in that specific language, whereas **Published** indicates that content has been published in that language.

If you want to change the default language, simply select the language and click “Set as default language”.

When selecting the language, you can also delete or edit it. **Note:** *You are not able to delete a default language or if the language has any Custom Journeys connected to it.*

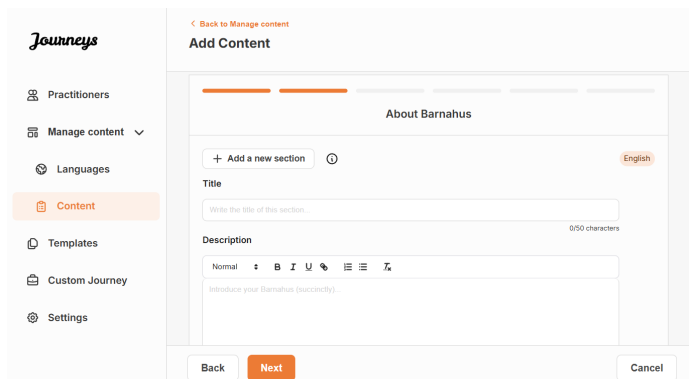

Add content in default language

1. After you have added your default language, navigate to the ‘Content’ tab under ‘Manage content’. Select the language that you have chosen as your default language in the drop-down menu and click “+ Add Content”.

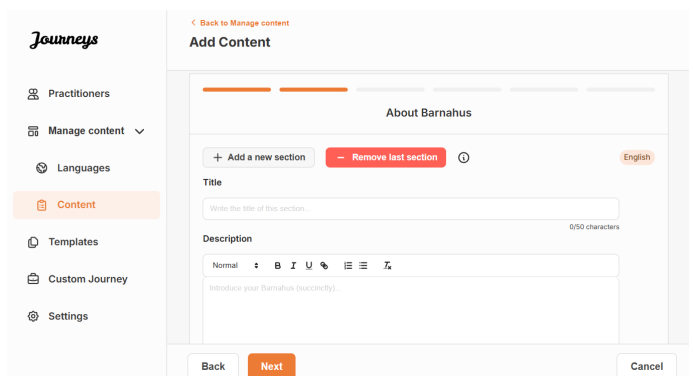

2. It’s important to add the content in the order that you’d like to show it in the app, once content has been added the order cannot be changed without deleting all the content and starting over.

- a. **About Barnahus:** Under ‘About Barnahus’ you will be asked to fill out information about your Barnahus that would be helpful for the child. *Keep in mind that this will be the same for all the children, so keep it generic but helpful.*

You can add multiple versions of ‘About your Barnahus’ in case you want to have different versions of the text tailored to different age groups. You can also add additional sections about what the child can expect during a visit, and what usually happens/can happen after the visit.

To add more versions of your text or additional sections, click on “+ Add a new section” – and a new section will appear below the previous one (containing title, description, audio transcript, and photo as well). If you want to remove an additional section, click on “Remove last section” and it will remove the latest section that was added.

Examples of what you can write:

“About your Barnahus”

Barnahus is a safe and child-friendly place where children who are presumed victims of violence receive the support they need. At Barnahus, law enforcement, social services, physical health and mental health staff work together under one roof. By bringing the professions together and integrating how they work, children don't have to repeat their stories many times.

“What the child can expect”

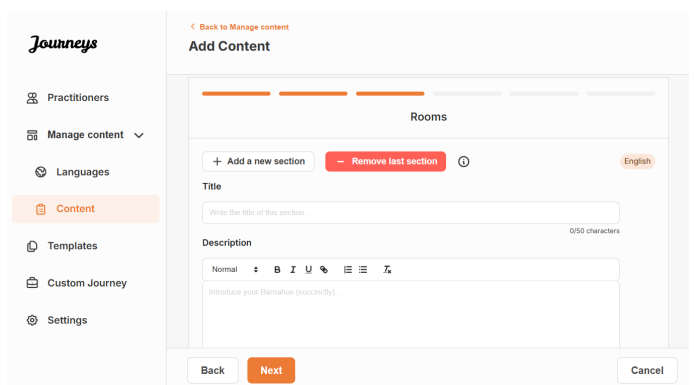

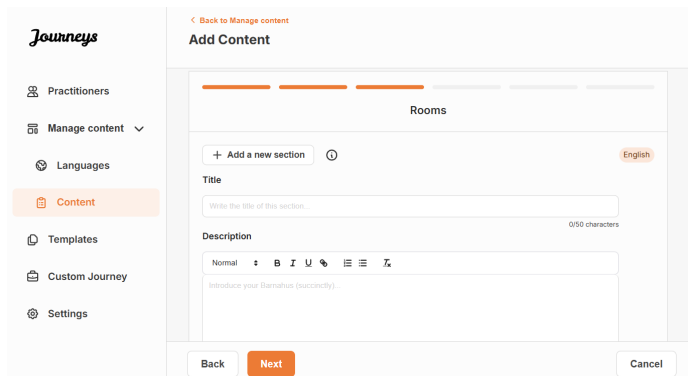

At Barnahus, you will meet professionals from law enforcement, social services, physical health and mental health, that will provide you support throughout the day.

“What happens after the visit”

After your visit to Barnahus, you'll receive ongoing support focused on helping you feel your best.

- b. Rooms:** Under 'Rooms' you will be asked to fill out information about the different rooms in your Barnahus and what usually happens in these different rooms, as well as add photos of the rooms if you'd like. *Keep in mind that this will be the same for all the children, so keep it generic but helpful.*

To add more rooms or if you want to have different versions of the text tailored to different age groups, simply click on “+ Add a new section” and a new section will appear below the previous one (containing title, description, audio transcript, and photo as well). If you want to remove an additional section, click on “Remove last section” and it will remove the latest section that was added.

Examples of what you can write:

“Waiting room”

You wait in this soothing environment until an adult comes to take you to the next step in your appointment. There will be toys to play with and books to read. You can ask the people who work there any questions you have about your visit.

“Interview room”

In the interview room, you will talk with a professional who has a lot of experience in talking and listening to young people who may have been mistreated. They will give you instructions and ask questions. You can ask questions if you want, too. Your conversation will be recorded using cameras and microphones. This is so you don't have to be interviewed many times, and to ensure that everything is done correctly.

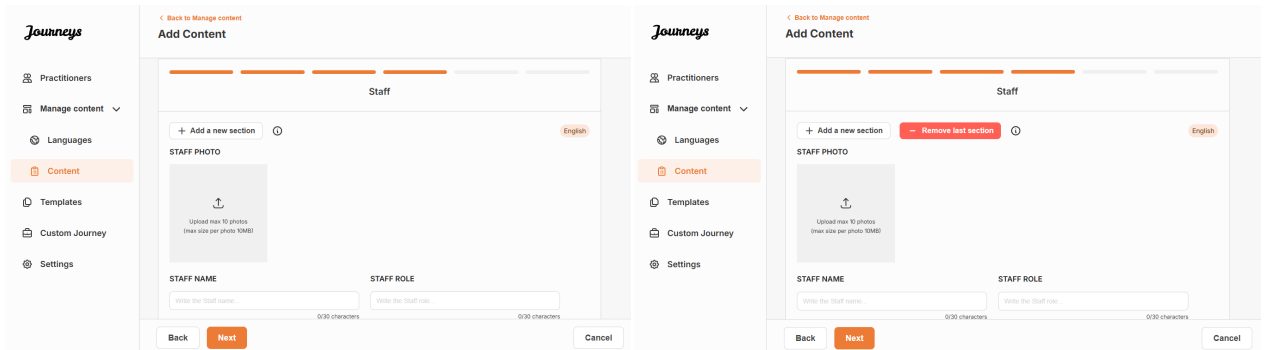

“Examination room”

Here, you can meet a medical professional who will ensure that your health is OK and that you are feeling well. They will tell you what they would like to check, and you will say if it is OK or not. The room looks a lot like a doctor's office, with tools and an examination table.

- c. **Staff:** Under 'Staff' you will be asked to fill out information about the staff at the Barnahus.

You can add as many 'Staff' as you want. To add more staff simply click on "+ Add a new section" and a new section will appear below the previous one (with the option to add photo, staff name, staff role and a description). *Keep in mind that you will need consent from the staff in question to add a photo of them and how they would like to show their name.*

If you want to remove an additional section, click on "Remove last section" and it will remove the latest section that was added.

What you can write:

In the description for the staff, you can add anything that could be interesting for a child to know; this can be favourite foods, hobbies, talents and so on. Anything that would humanise the staff for a child that may be scared about meeting new adults.

Note: As there is no easy way to distinguish between the content if you have added different versions of the same text by adding additional sections (e.g. text tailored to different age groups) – we recommend that you have a system in place to aid you in distinguishing between the different versions. This could be that you always add the content in a certain order (for example content for the younger age group is always added first and older age group second, or if you include something distinguishing in the text itself (for example using smileys for one age group but not the other, bolding something in the first version but not the second)

3. Preview the content before publishing it to see how it will look in the mobile app, and if you're satisfied – click on publish.
4. Once you have published content in the default language, you can create auto-translated content in another language based on the information that you have just provided (more about this under "[Add content in an auto-translated language](#)" below).
5. You can always add additional sections later, for example if you hire new staff and want to add them to the content. To do this, choose the heading that you would like to add a new section to (About, Room or Staff), and click on +Add About Barnahus/Room/Staff in the top right corner.
6. To edit already added content simply select the section you want to edit by marking the box – and then click "Edit" in the top right corner.

Note if you have added more than one language in the dashboard: When you add new content later on, or edit already added content - you will have to review the edited/newly added content in all languages that you have added before you can publish the content, This to ensure that the new content is published in all languages.

7. To delete already added content select the section you want to delete by marking the box – and then click “Delete” in the top right corner.

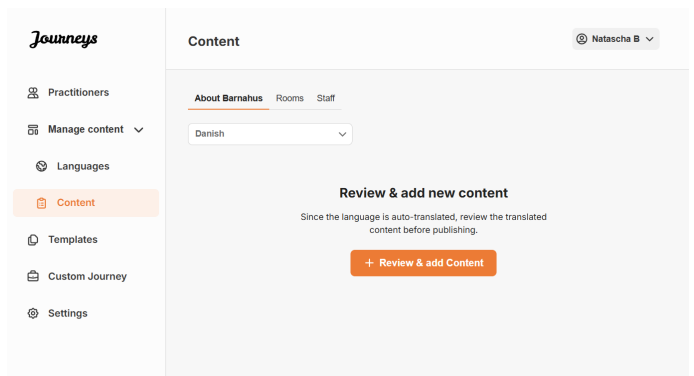

Add content in an auto-translated language

1. Once you have added content in the default language you can go back to the languages tab and add other languages with auto-translation enabled. The auto-translation is generated by Google and needs to be manually checked for mistakes before publishing.

2. Navigate to the ‘Content’ tab under ‘Manage content’ and in the drop-down menu, select the language that you would like to add auto-translated content in.

3. When you click ‘Review & add Content’ you will be shown the auto-translated version of the content that you added in the default language.

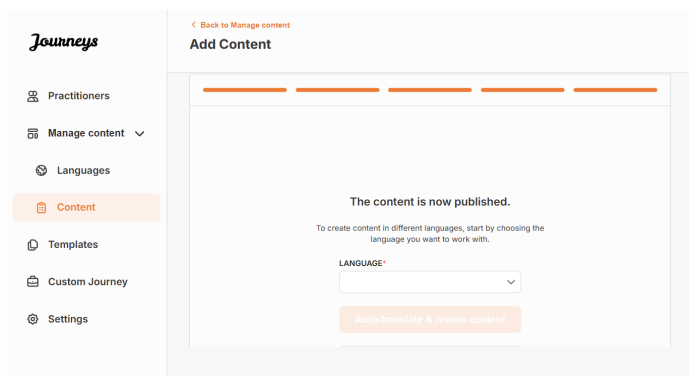

Go through the translation and make changes where necessary.

4. Preview how the content will look in the app and publish.

5. Once you have published the translated content, you can choose to review another auto-translated language.

Anytime you update the content or add additional content in the default language, you will have to review the new content in all languages in order to publish the content to ensure that the new content is published in all languages.

Creating templates

To streamline the process of designing a custom journey for a child, you can create templates using the content you have added. Templates serve as a starting point, simplifying the creation of custom journeys – you can use the created templates as many times as you'd like.

After a template is created, it can be used to build a custom journey for the child and make further adjustments as needed. This flexible approach ensures that the journey meets the unique needs of the child, while also saving time during the planning process.

Example:

If you've added additional versions of your text tailored to different age groups – e.g. 3–9 years and 10–17 years – you can create separate templates for each group. For instance, you might create a template containing all the text designed for the younger age group.

Additionally, if there are typical cases in your Barnahus where only certain rooms are visited, you can create a template that only includes those rooms, rather than all available rooms.

Another example of how you can use templates is if you'd like to provide the same informative journey to multiple children showing all the rooms and staff in your Barnahus. In this instance, you can create a so-called generic template – or two if you have provided text for different age groups. We will go through how to create a journey that can be shared with multiple children under the heading "[Create a Journey to be shared with multiple children](#)".

See the video tutorial here: <https://www.youtube.com/watch?v=80W1ei88Cjc>

1. Navigate to the "Templates" tab in the side menu
2. Click on "Create template" – *Please note that you cannot create a template before you have added content about your Barnahus*

3. Name your template.

We recommend naming it something that is easily identifiable for other practitioners in your Barnahus as well (e.g. "3–9 Y/O Barnahus Journey", "10–17 Y/O Journey without Examination room" etc.)

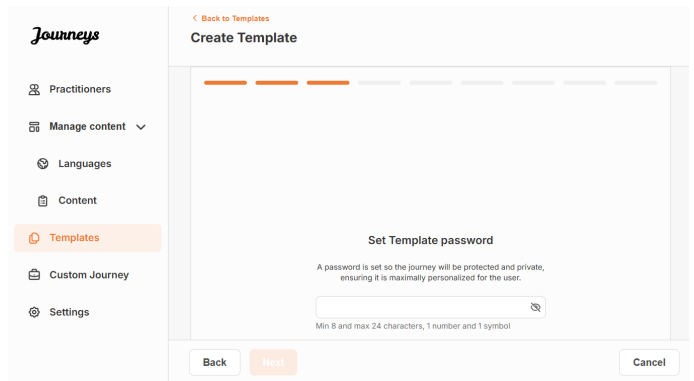

The screenshot shows the 'Create Template' screen. On the left is a side menu with options: Practitioners, Manage content, Languages, Content, Templates (highlighted), Custom Journey, and Settings. The main area has a header 'Create Template' and a sub-header 'Please enter template name'. Below this is a text input field labeled 'TEMPLATE NAME:'. At the bottom are 'Back', 'Next', and 'Cancel' buttons.

4. Select whether or not the template will be used to create generic journeys.

Generic journeys are journeys that aren't tailored to a specific child and can be shared with multiple children. For example, if you want to create a general introduction to your Barnahus – showcasing everything the Barnahus has to offer.

The screenshot shows the 'Create Template' screen. On the left is a side menu with options: Practitioners, Manage content, Languages, Content, Templates (highlighted), Custom Journey, and Settings. The main area has a header 'Create Template' and a sub-header 'Will this template be used to create generic journeys?'. Below this is a paragraph explaining generic journeys: 'Generic journeys are journeys that can be shared with multiple children at once. All other journeys can only be accessed by the child that the journey has been tailored for'. There are two radio button options: 'Yes' and 'No'. At the bottom are 'Back', 'Next', and 'Cancel' buttons.

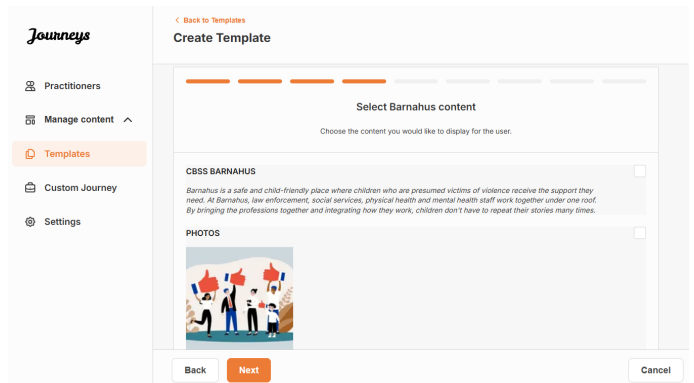

- **If you select NO:** Please proceed to the next step in this guide.
- **If you select YES:** Create an appropriate password for this template. This password will later be used by the children to access the generic journey in the app.

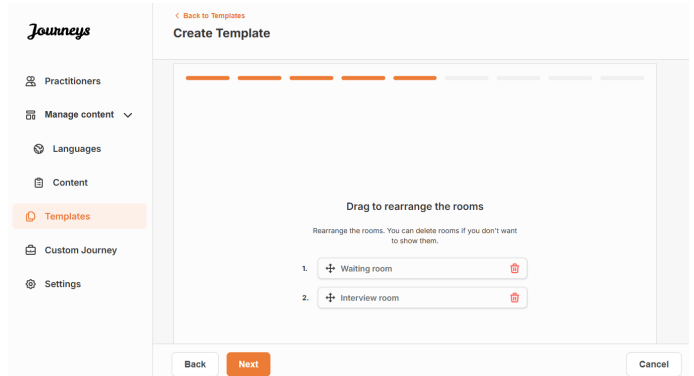

See more about how to create a generic journey under the heading [“Create a Journey to be shared with multiple children”](#).

5. Select the content that you would like to include in this template – all content you have added in the previous steps will be shown to you at once, it’s important to have a clear system to distinguish between different versions of the same content.

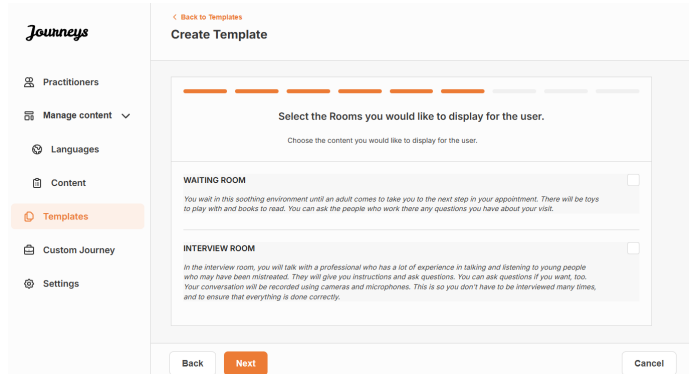

- Select the content that you would like to include about your Barnahus by clicking the boxes of the content that you would like to include in the template.

- Select the order you would like to showcase the rooms or if you want to remove one of the rooms for this template.

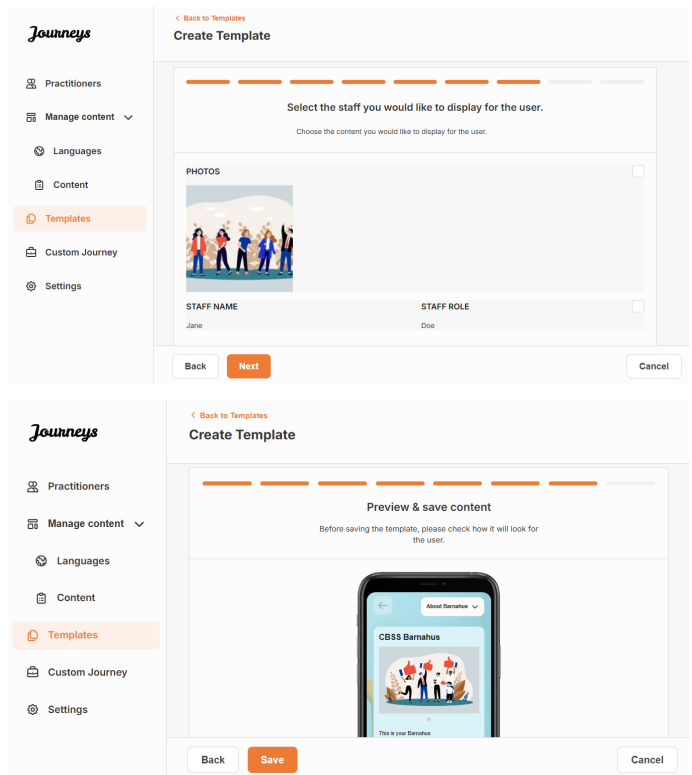

- Select the content that you would like to include about the rooms by clicking the boxes of the content that you would like to include in the template.

- d. Select the content that you would like to include about the staff by clicking the boxes of the content that you would like to include in the template.

6. Preview your template and save.

You can create as many templates as you want.

Creating a Custom Journey for a child

In order to create a custom journey for a child, you first create a unique Custom ID that you will link the journey that you want to create to. The Custom ID also serves as a username for the child to access their custom journey in the app.

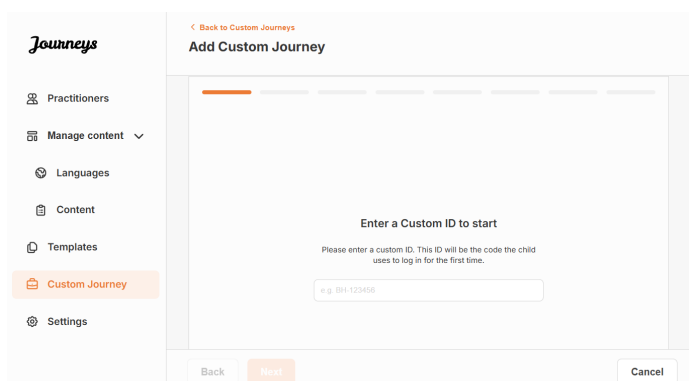

When creating a Custom Journey for a child you can rearrange the rooms, and tailor the language and the content you want to show to the child. The child will then be able to access their Custom Journey in the app on a mobile/tablet by entering the Custom ID and a password.

See the video tutorial here: <https://www.youtube.com/watch?v=evQyQOlvPdY>

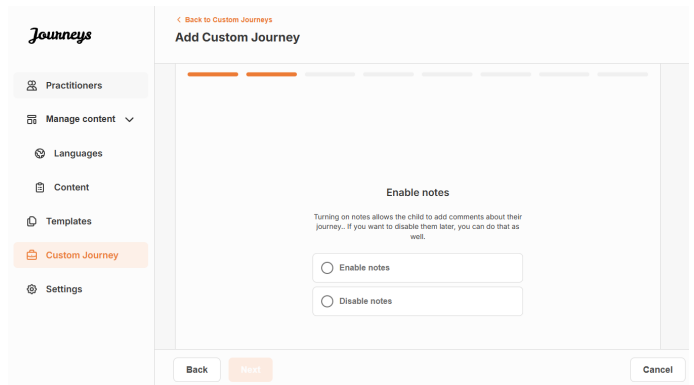

1. Navigate to the "Custom Journey" tab in the side menu.

2. Select "Add Custom Journey"

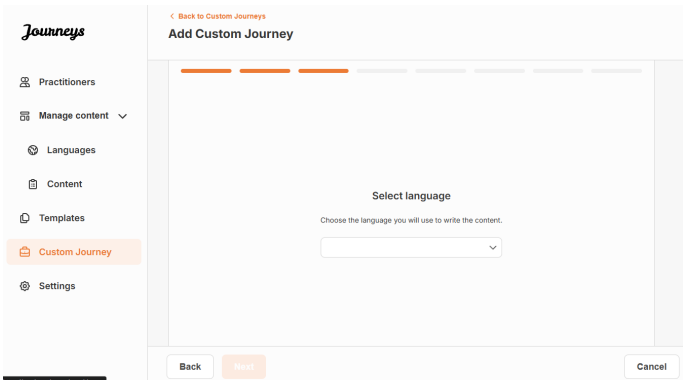

3. Come up with a distinct/identifiable but appropriate Custom ID for the child that you want to create a personalised journey for. This Custom ID will serve as a username for the child in the app.

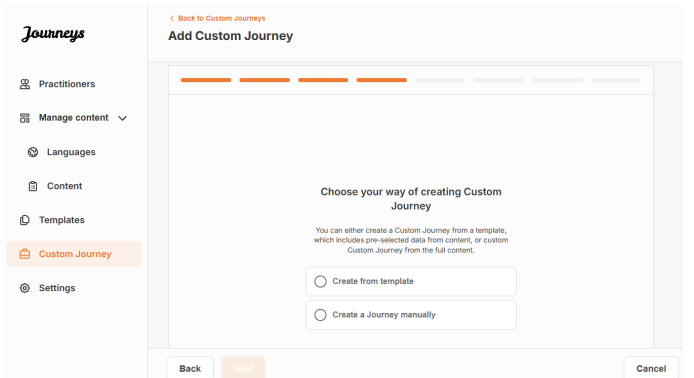

4. Enable/disable notes depending on the local/national context and the case itself (see section 3.5 in “[The Journeys App: What to keep in mind when using the app](#)”) – this can be enabled/disabled at any time.

5. Select the language you would like to create the Custom Journey in.

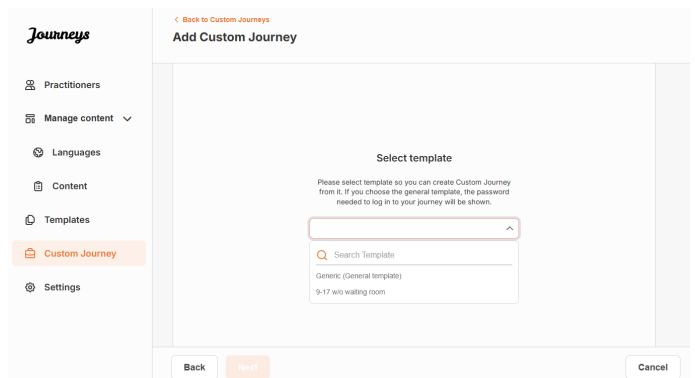

6. Select if you'd like to create the journey from a template or if you'd like to create it manually from scratch.

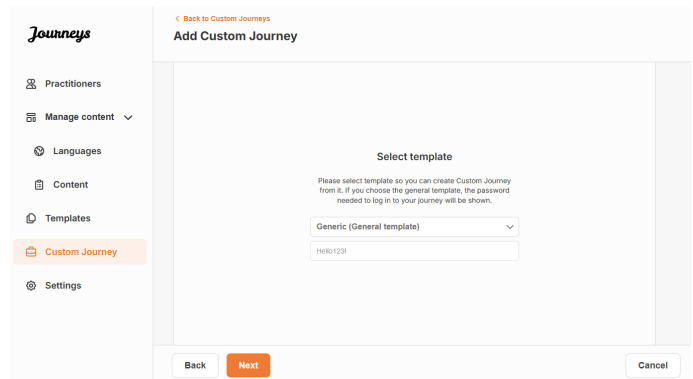

Create a Custom Journey from a template

If you've created a template, you can choose "Create from template" when you're creating a Custom Journey for a child. This will automatically create the journey for you.

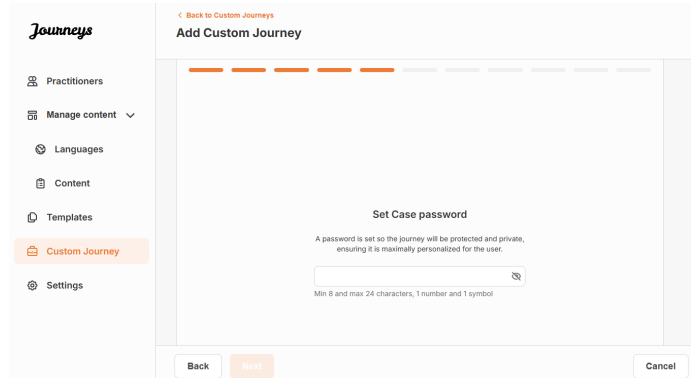

1. Select the template that you would like to use in the dropdown menu.

2. If you select a *general template* (i.e. a template that will be used for generic journeys) the password for the Journey will be shown to you once you've selected the template.

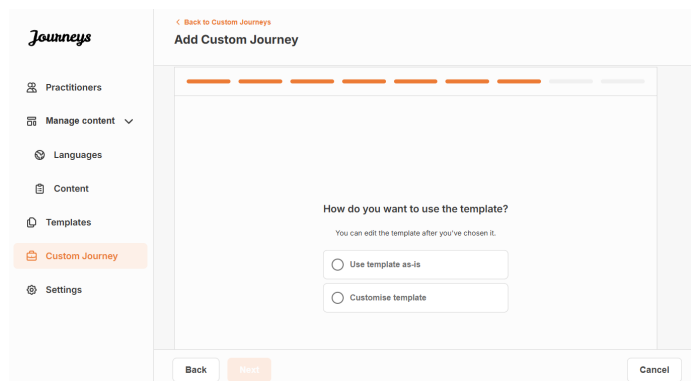

If you select a template that is not a general template, you will be asked to create a one-time password for the Custom Journey. When the child has logged in for the first time with the one-time password, they will be prompted to change their password.

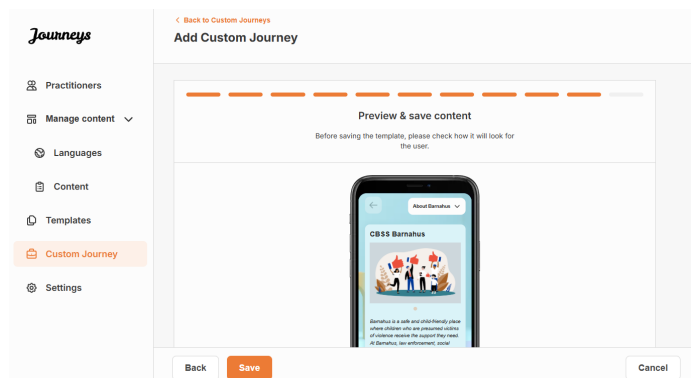

Tip! For ease you can make the one-time password the same as the Custom ID (as long as it meets the requirements) – since the child will be prompted to change the password once they have logged in for the first time.

3. Choose if you'd like to use the template as is ("*Use template as-is*"), or if you want to customise it further ("*Customise template*").

Use template as-is:

If you choose to use a template as-is you are automatically redirected to the last step to preview and save the Custom Journey – all information about the Barnahus, rooms and staff will be shown as it is in the template.

Share the Custom ID (which serves as a username) and the one-time password with the child for them to be able to access their tailored journey on the mobile app.

Customise template:

If you choose to customise the template, you are able to further limit what is shown to the child. For example, if you know that the child will not meet certain staff during their Barnahus visit, you can customise the template for this journey to not show that staff.

Please note that you cannot add more information than is included in the template, only narrow it further.

1. Select the content from the template that you would like to include in this Custom Journey.

- a. Select the content that you would like to include about your Barnahus in this Custom Journey by clicking the boxes of the content that you would like to include from the template.

The screenshot shows the 'Add Custom Journey' screen in the Journeys app. On the left is a navigation menu with options: Practitioners, Manage content, Languages, Content, Templates, Custom Journey (highlighted), and Settings. The main area is titled 'Select Barnahus content' and contains two sections: 'CBSB BARNAHUS' with a descriptive paragraph and a checkbox, and 'PHOTOS' with an image of people and a checkbox. At the bottom are 'Back', 'Next', and 'Cancel' buttons.

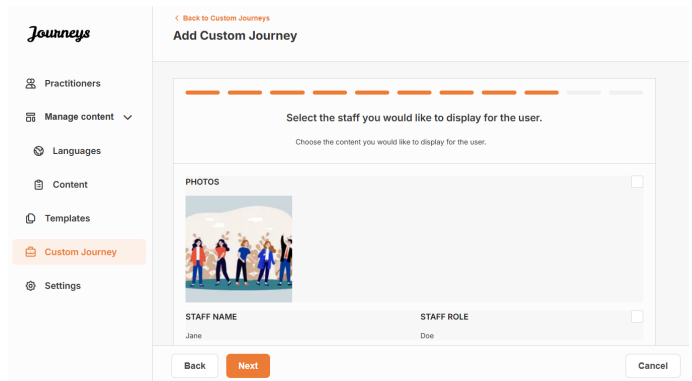

- b. Select the order you would like to showcase the rooms or if you want to remove one of the rooms from the Custom Journey.

The screenshot shows the 'Add Custom Journey' screen in the Journeys app. The main area is titled 'Drag to rearrange the rooms' and contains the instruction 'Rearrange the rooms. You can delete rooms if you don't want to show them.' Below this is a list of two rooms: '1. Waiting room' and '2. Interview room', each with a plus icon on the left and a trash icon on the right. At the bottom are 'Back', 'Next', and 'Cancel' buttons.

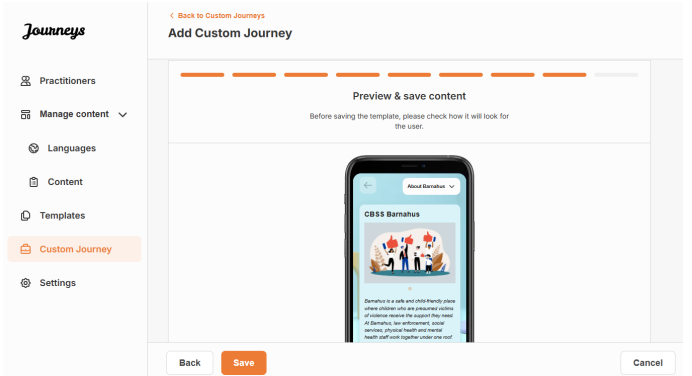

- c. Select the content that you would like to include about the rooms in this Custom Journey by clicking the boxes of the content that you would like to include.

The screenshot shows the 'Add Custom Journey' screen in the Journeys app. The main area is titled 'Select the Rooms you would like to display for the user.' and contains two sections: 'WAITING ROOM' with a descriptive paragraph and a checkbox, and 'INTERVIEW ROOM' with a descriptive paragraph and a checkbox. At the bottom are 'Back', 'Next', and 'Cancel' buttons.

- d. Select the content that you would like to include about the staff in this Custom Journey by clicking the boxes of the content that you would like to include.

2. Preview and save.

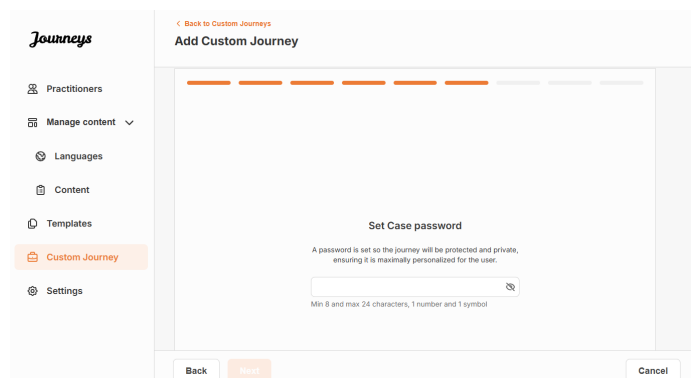

Share the Custom ID (which serves as a username) and the one-time password with the child for them to be able to access their Custom Journey on the mobile app.

Create Custom Journey manually from scratch (“Create a Journey manually”)

Creating a Custom Journey from scratch follows the same process as when you are creating a template. You are presented with all the information that was added when setting up the content for the app, and you pick and choose what rooms, staff, and information you would like to include in the journey.

Again, it is important to have a clear system to distinguish between different versions of the same content.

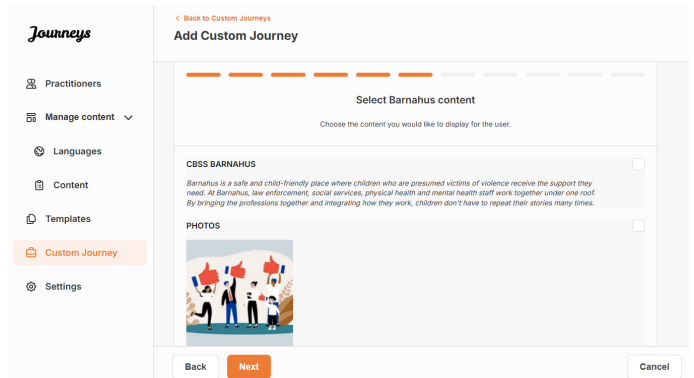

1. Create a one-time password for the Custom Journey. This password will serve as a one-time passcode for the child to access their journey in the app – after the child has logged in for the first time, they will be prompted to change their password.

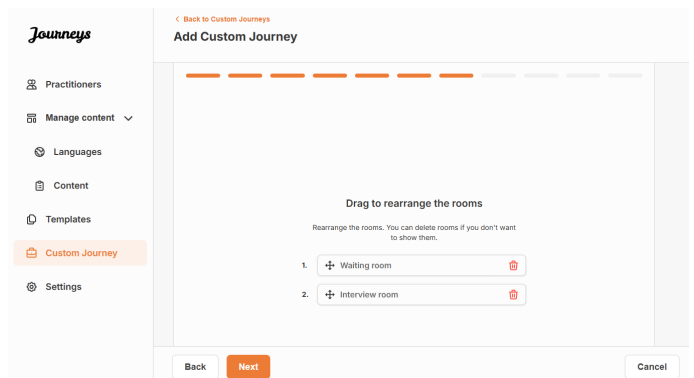

Tip! For ease you can make the one-time password the same as the Custom ID (as long as it meets the requirements) – since the child will be prompted to change the password once they have logged in for the first time.

2. Select the content that you would like to include in this journey:

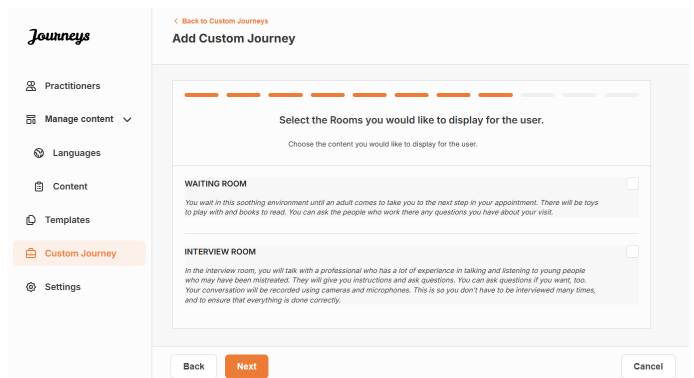

a. Select the content that you would like to include about your Barnahus by clicking the boxes of the content that you would like to include in the Custom Journey.

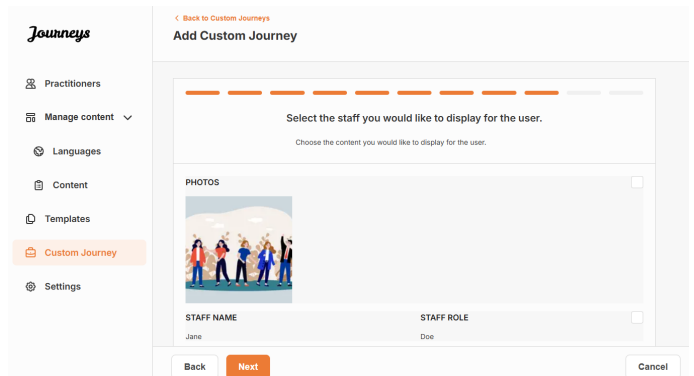

b. Select the order you would like to showcase the rooms or if you want to remove one of the rooms for this journey.

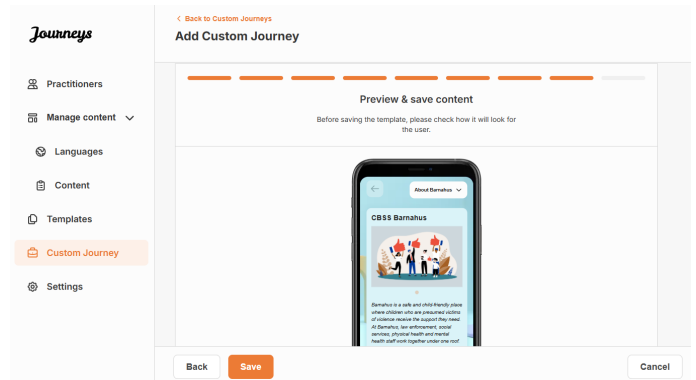

c. Select the content that you would like to include about the rooms by clicking the boxes of the content that you would like to include.

d. Select the content that you would like to include about the staff by clicking the boxes of the content that you would like to include.

3. Preview the Custom Journey and save.

Share the Custom ID (which serves as a username) and the one-time password with the child for them to be able to access their tailored journey on the mobile app.

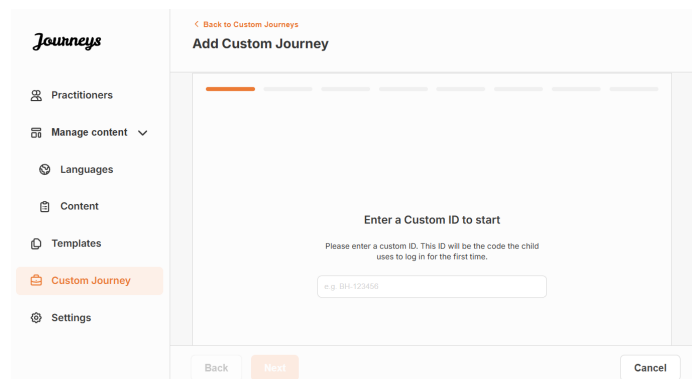

Create a journey to be shared with multiple children

In order to create a Journey that can be shared with multiple children, you simply need to create a Custom Journey with notes disabled from one of the so-called general templates that you have created earlier.

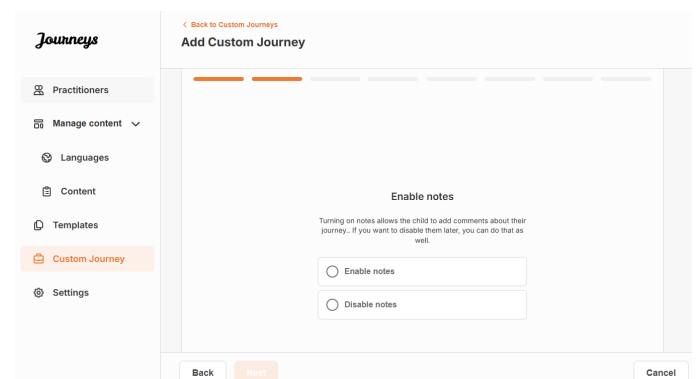

1. Navigate to the “Custom Journey” tab in the side menu.

2. Select “Add Custom Journey”

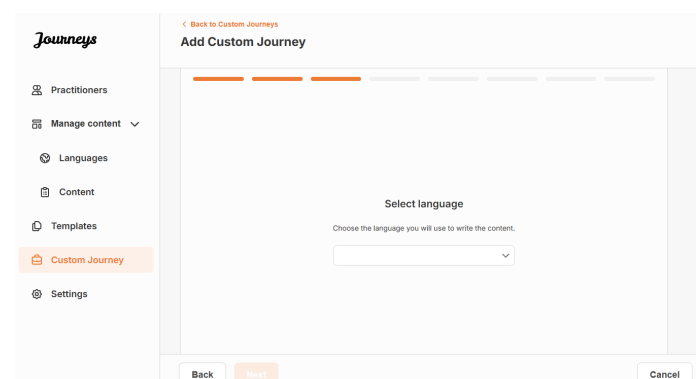

3. Come up with a distinct/identifiable but appropriate Custom ID for the journey. This Custom ID will serve as a username for the child in the app.

4. Disable notes.

5. Select the language you would like to create the Custom Journey in.

6. Select 'Create from template'

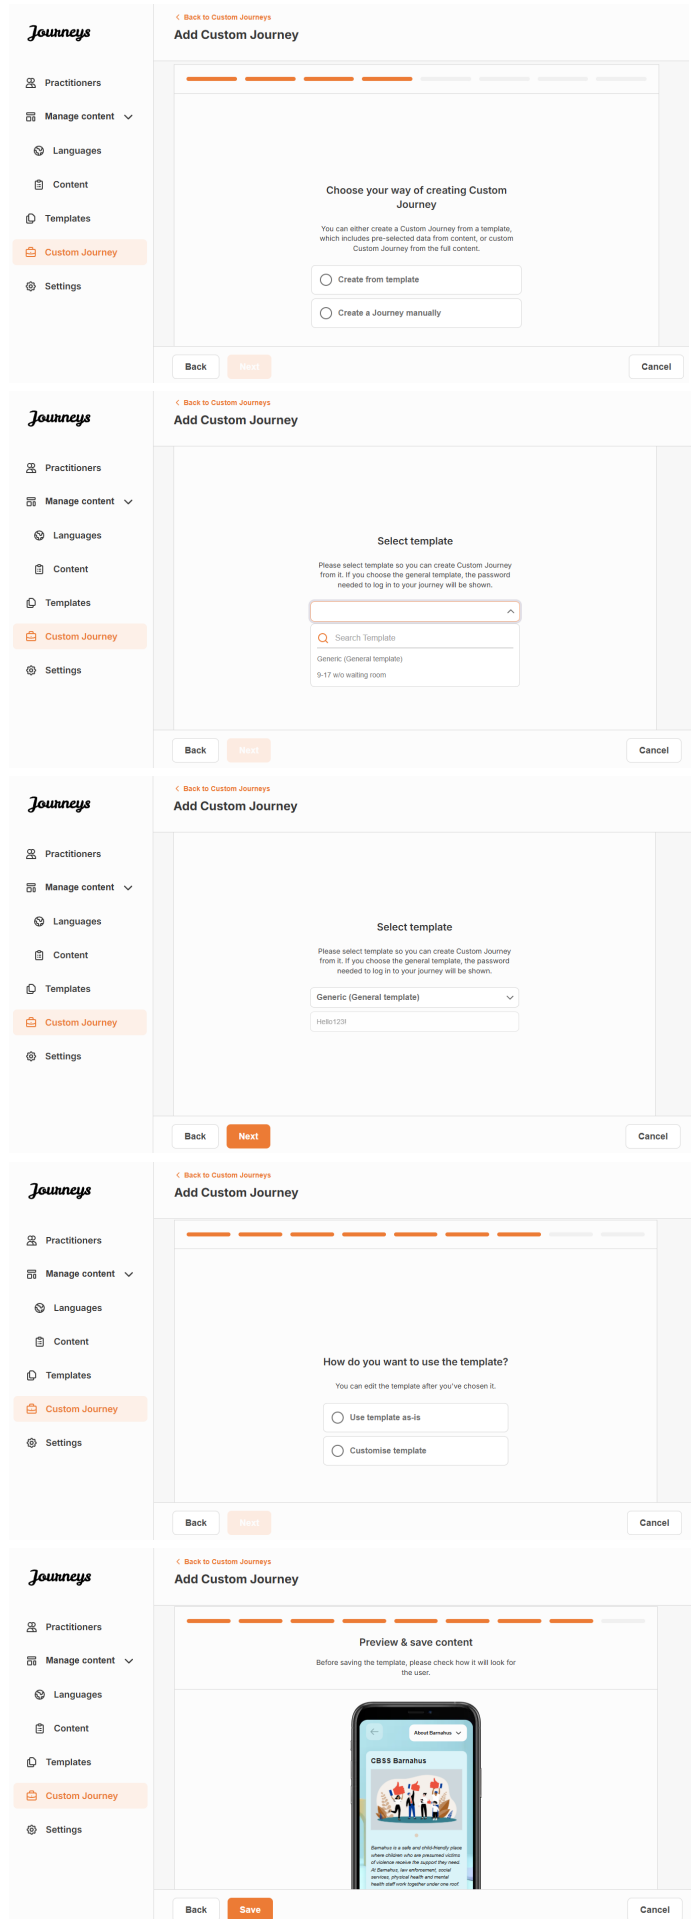

7. Select the general template that you have created – general templates are easily distinguished from other templates as they are marked with '(general template)'

The password for the Journey will be shown to you once you've selected the template.

8. Select "Use template as-is".

You will be automatically redirected to the last step to preview and save the Custom Journey – all information about the Barnahus, rooms and staff will be shown as it is in the template.

Share the Custom ID (which serves as a username) and the password with the child for them to be able to access the generic journey on the mobile app.

Practitioner Onboarding

The Practitioner is added to the dashboard by an Admin or the Master Admin.

As a practitioner your main role is to create custom IDs and custom journeys for children visiting your Barnahus, showing the specific rooms that they will visit and the staff they will meet during their visit. You cannot add any new content to the app, only use the already existing content that has been added by the Admins and/or the Master Admin.

To illustrate, the admin might add photos of all the people involved in your Barnahus and all the rooms. However, you as the practitioner know that on the day that a child will visit your Barnahus, they will not meet certain staff and will not visit the mental health room. In that case, you can tailor the journey to ensure that the right people and rooms are visible to them in the app, and the rest is hidden.

Accessing Your Practitioner Dashboard

1. Accept the invitation email and log in to your Practitioner dashboard.
2. Familiarise yourself with the dashboard interface and available functionalities.

Creating templates

To streamline the process of designing a custom journey for a child, you can create templates using the content you have added. Templates serve as a starting point, simplifying the creation of custom journeys – you can use the created templates as many times as you'd like.

After a template is created, it can be used to build a custom journey for the child and make further adjustments as needed. This flexible approach ensures that the journey meets the unique needs of the child, while also saving time during the planning process.

Example:

If you've added additional versions of your text tailored to different age groups – e.g. 3–9 years and 10–17 years – you can create separate templates for each group. For instance, you might create a template containing all the text designed for the younger age group.

Additionally, if there are typical cases in your Barnahus where only certain rooms are visited, you can create a template that only includes those rooms, rather than all available rooms.

Another example of how you can use templates is if you'd like to provide the same informative journey to multiple children showing all the rooms and staff in your Barnahus. In this instance, you can create a so-called generic template – or two if you have provided text for different age groups. We will go through how to create a journey that can be shared with multiple children under the heading "[Create a Journey to be shared with multiple children](#)".

See the video tutorial here: <https://www.youtube.com/watch?v=80W1ei88Cjc>

1. Navigate to the "Templates" tab in the side menu

2. Click on “Create template” – *Please note that you cannot create a template before you have added content about your Barnahus*

3. Name your template.

We recommend naming it something that is easily identifiable for other practitioners in your Barnahus as well (e.g. “3-9 Y/O Barnahus Journey”, “10-17 Y/O Journey without Examination room” etc.)

4. Select whether or not the template will be used to create generic journeys.

Generic journeys are journeys that aren’t tailored to a specific child and can be shared with multiple children. For example, if you want to create a general introduction to your Barnahus – showcasing everything the Barnahus has to offer.

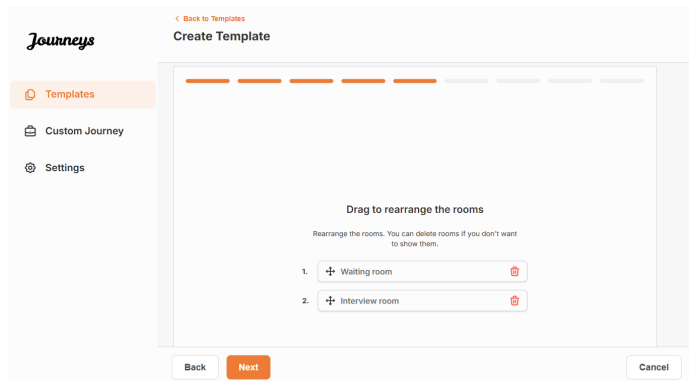

- **If you select NO:** Please proceed to the next step in this guide.
- **If you select YES:** Create an appropriate password for this template. This password will later be used by the children to access the generic journey in the app.

See more about how to create a generic journey under the heading [“Create a Journey to be shared with multiple children”](#).

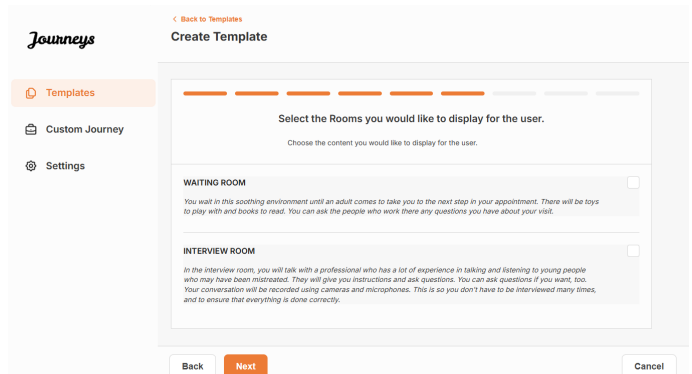

5. Select the content that you would like to include in this template – all content you have added in the previous steps will be shown to you at once, it’s important to have a clear system to distinguish between different versions of the same content.

- Select the content that you would like to include about your Barnahus by clicking the boxes of the content that you would like to include in the template.

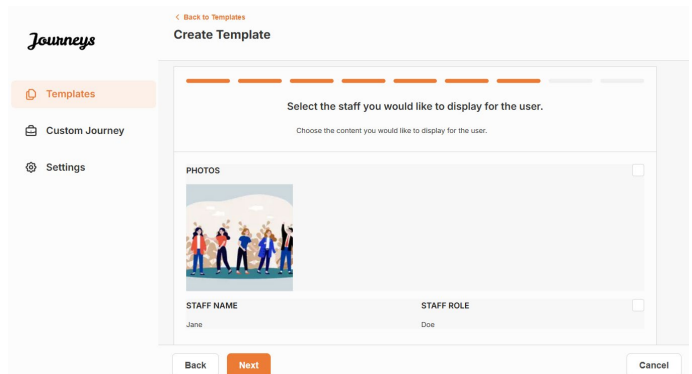

- b. Select the order you would like to showcase the rooms or if you want to remove one of the rooms for this template.

- c. Select the content that you would like to include about the rooms by clicking the boxes of the content that you would like to include in the template.

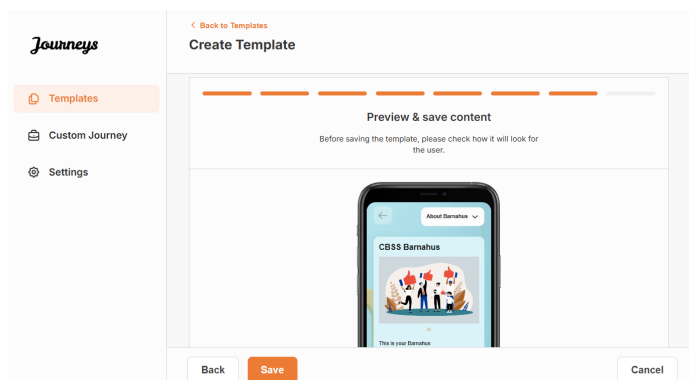

- d. Select the content that you would like to include about the staff by clicking the boxes of the content that you would like to include in the template.

6. Preview your template and save.

You can create as many templates as you want.

Creating a Custom Journey for a child

In order to create a custom journey for a child, you first create a unique Custom ID that you will link the journey that you want to create to. The Custom ID also serves as a username for the child to access their custom journey in the app.

When creating a Custom Journey for a child you can rearrange the rooms, and tailor the language and the content you want to show to the child. The child will then be able to access their Custom Journey in the app on a mobile/tablet by entering the Custom ID and a password.

See the video tutorial here: <https://www.youtube.com/watch?v=evQyQOlvPdY>

1. Navigate to the “Custom Journey” tab in the side menu.
2. Select “Add Custom Journey”

3. Come up with a distinct/identifiable but appropriate Custom ID for the child that you want to create a personalised journey for. This Custom ID will serve as a username for the child in the app.

4. Enable/disable notes depending on the local/national context and the case itself (see section 3.5 in “[The Journeys App: What to keep in mind when using the app](#)”) – this can be enabled/disabled at any time.

5. Select the language you would like to create the Custom Journey in.

6. Select if you’d like to create the journey from a template or if you’d like to create it manually from scratch.

The screenshots show the 'Add Custom Journey' screen in the Journeys app, which is accessed via the 'Custom Journey' tab in the side menu. The screen is divided into a left sidebar with navigation options (Templates, Custom Journey, Settings) and a main content area.

- Step 1:** The main content area displays the title 'Add Custom Journey' and a prompt: 'Enter a Custom ID to start'. Below this, it says 'Please enter a custom ID. This ID will be the code the child uses to log in for the first time.' and provides an input field with the example 'e.g. BH4-123456'. There are 'Back', 'Next', and 'Cancel' buttons at the bottom.
- Step 2:** The main content area displays the title 'Add Custom Journey' and a prompt: 'Enable notes'. Below this, it says 'Turning on notes allows the child to add comments about their journey... if you want to disable them later, you can do that as well.' and provides two radio button options: 'Enable notes' and 'Disable notes'. There are 'Back', 'Next', and 'Cancel' buttons at the bottom.
- Step 3:** The main content area displays the title 'Add Custom Journey' and a prompt: 'Select language'. Below this, it says 'Choose the language you will use to write the content.' and provides a dropdown menu. There are 'Back', 'Next', and 'Cancel' buttons at the bottom.
- Step 4:** The main content area displays the title 'Add Custom Journey' and a prompt: 'Choose your way of creating Custom Journey'. Below this, it says 'You can either create a Custom Journey from a template, which includes pre-selected data from content, or custom Custom Journey from the full content.' and provides two radio button options: 'Create from template' and 'Create a Journey manually'. There are 'Back', 'Next', and 'Cancel' buttons at the bottom.

Create a Custom Journey from a template

If you've created a template, you can choose "Create from template" when you're creating a Custom Journey. This will automatically create the journey for you.

1. Select the template that you would like to use in the dropdown menu.

2. If you select a *general template* (i.e. a template that will be used for generic journeys) the password for the Journey will be shown to you once you've selected the template.

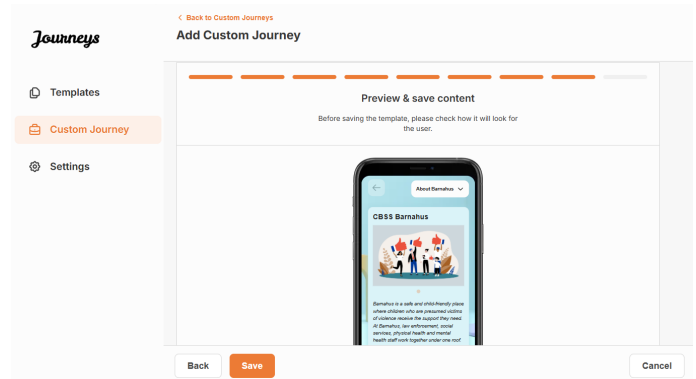

If you select a template that is not a general template, you will be asked to create a one-time password for the Custom Journey. When the child has logged in for the first time with the one-time password, they will be prompted to change their password.

Tip! For ease you can make the one-time password the same as the Custom ID (as long as it meets the requirements)– since the child will be prompted to change the password once they have logged in for the first time.

3. Choose if you'd like to use the template as is ("Use template as-is"), or if you want to customise it further ("Customise template").

Use template as-is:

If you choose to use a template as-is you are automatically redirected to the last step to preview and save the Custom Journey – all information about the Barnahus, rooms and staff will be shown as it is in the template.

Share the Custom ID (which serves as a username) and the one-time password with the child for them to be able to access their tailored journey on the mobile app.

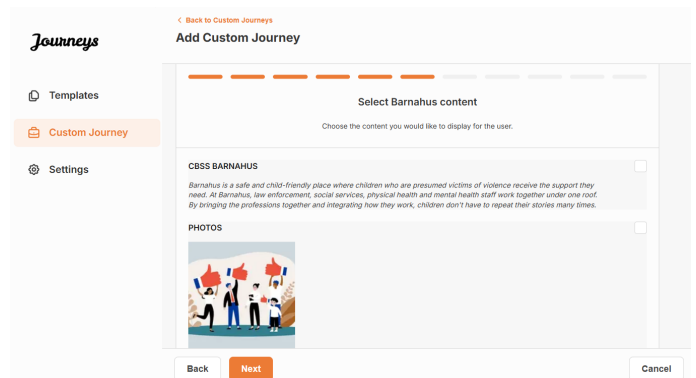

Customise template:

If you choose to customise the template, you are able to further limit what is shown to the child. For example, if you know that the child will not meet certain staff during their Barnahus visit, you can customise the template for this journey to not show that staff.

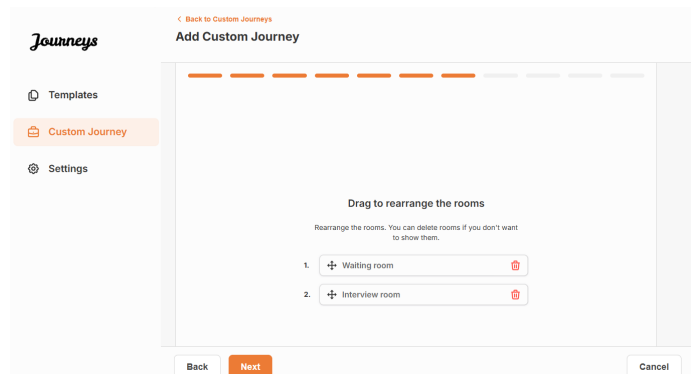

Please note that you cannot add more information than is included in the template, only narrow it further.

1. Select the content from the template that you would like to include in this Custom Journey.

- a. Select the content that you would like to include about your Barnahus in this Custom Journey by clicking the boxes of the content that you would like to include from the template.

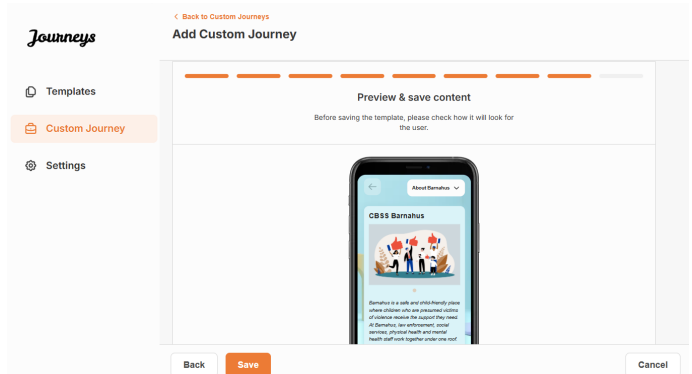

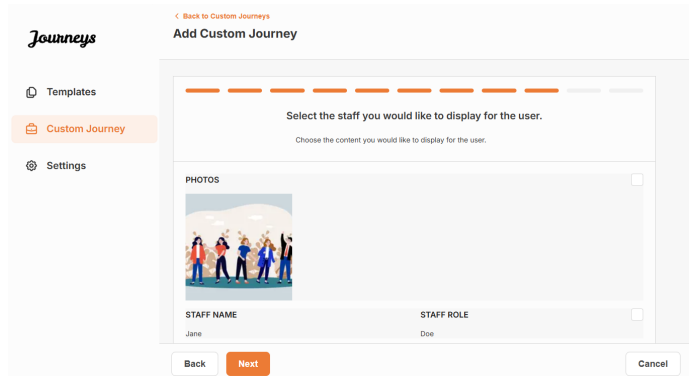

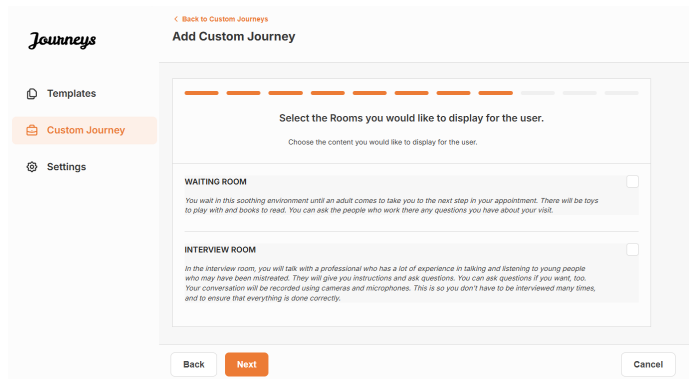

- b. Select the order you would like to showcase the rooms or if you want to remove one of the rooms from the Custom Journey.

- c. Select the content that you would like to include about the rooms in this Custom Journey by clicking the boxes of the content that you would like to include.

- d. Select the content that you would like to include about the staff in this Custom Journey by clicking the boxes of the content that you would like to include.

2. Preview and save.

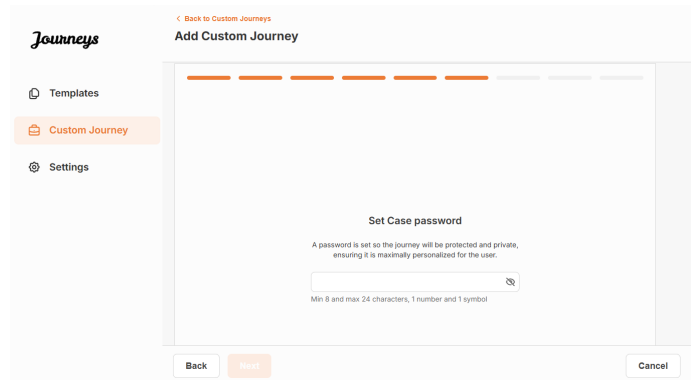

Share the Custom ID (which serves as a username) and the one-time password with the child for them to be able to access their Custom Journey on the mobile app.

Create Custom Journey manually from scratch (“Create a Journey manually”)

Creating a Custom Journey from scratch follows the same process as when you are creating a template. You are presented with all the information that was added when setting up the content for the app, and you pick and choose what rooms, staff, and information you would like to include in the journey.

Again, it is important to have a clear system to distinguish between different versions of the same content.

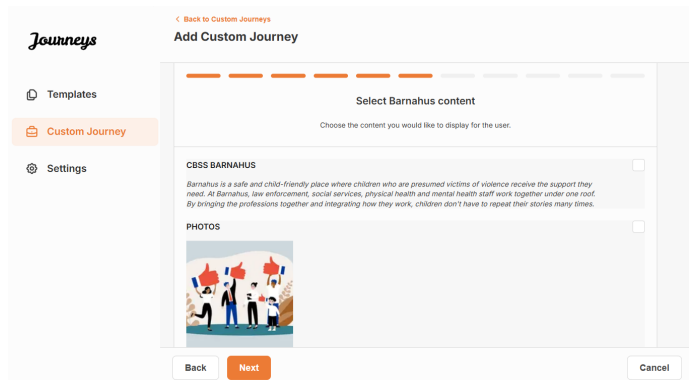

1. Create a one-time password for the Custom Journey. This password will serve as a one-time passcode for the child to access their journey in the app – after the child has logged in for the first time, they will be prompted to change their password.

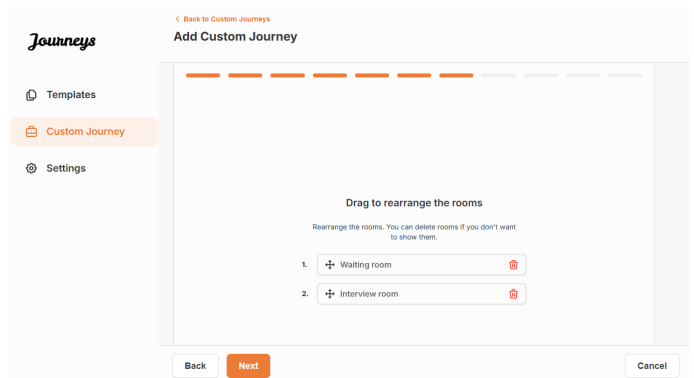

Tip! For ease you can make the one-time password the same as the Custom ID (as long as it meets the requirements)– since the child will be prompted to change the password once they have logged in for the first time.

2. Select the content that you would like to include in this journey:

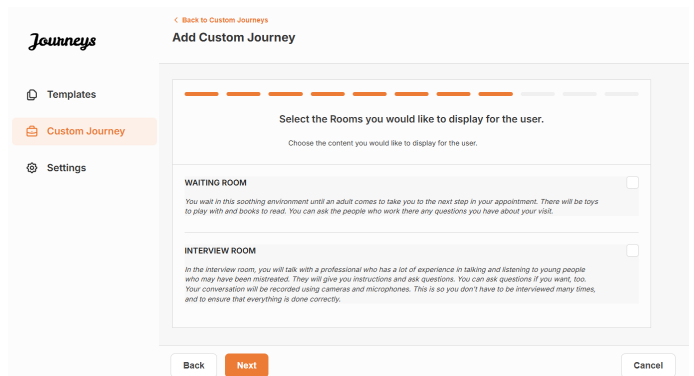

- a. Select the content that you would like to include about your Barnahus by clicking the boxes of the content that you would like to include in the Custom Journey.

- b. Select the order you would like to showcase the rooms or if you want to remove one of the rooms for this journey.

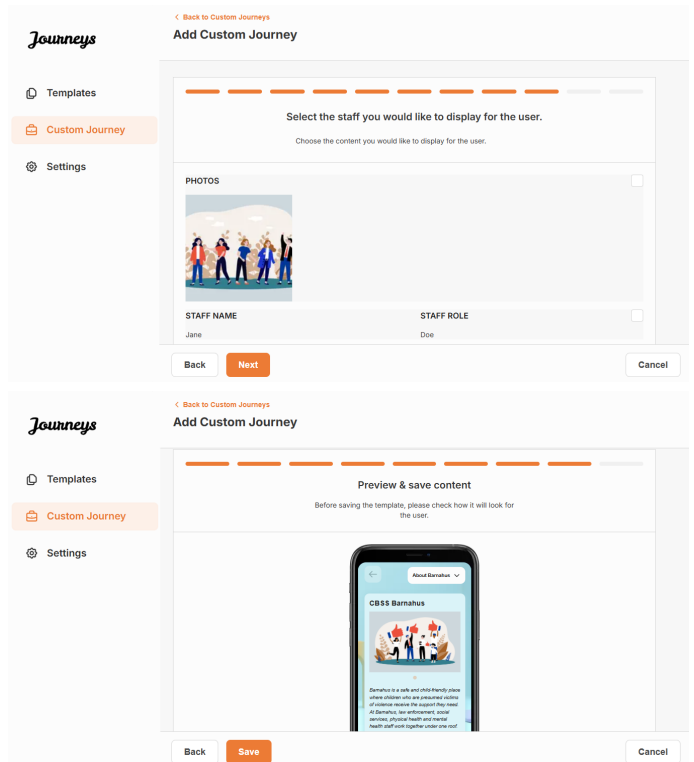

- c. Select the content that you would like to include about the rooms by clicking the boxes of the content that you would like to include.

- d. Select the content that you would like to include about the staff by clicking the boxes of the content that you would like to include.

3. Preview the Custom Journey and save.

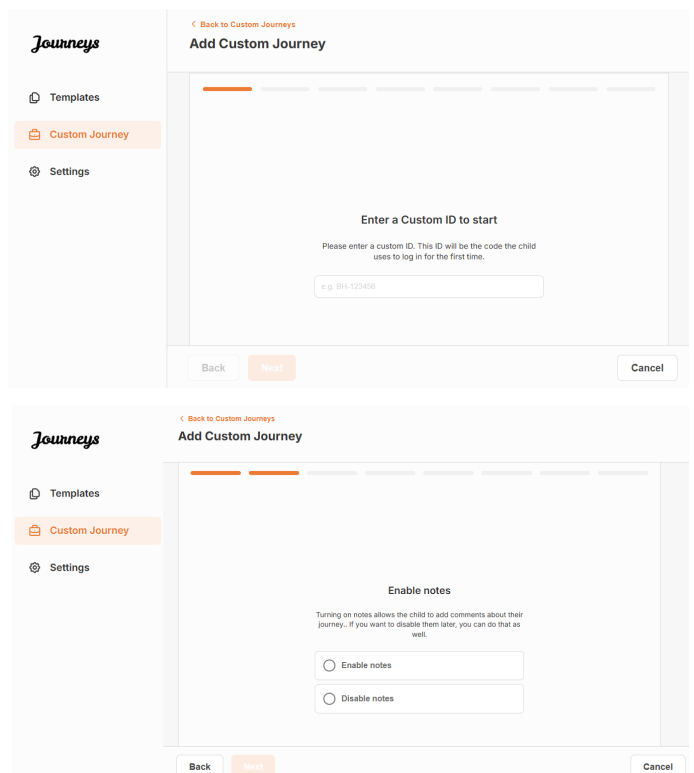

Share the Custom ID (which serves as a username) and the one-time password with the child for them to be able to access their tailored journey on the mobile app.

Create a journey to be shared with multiple children

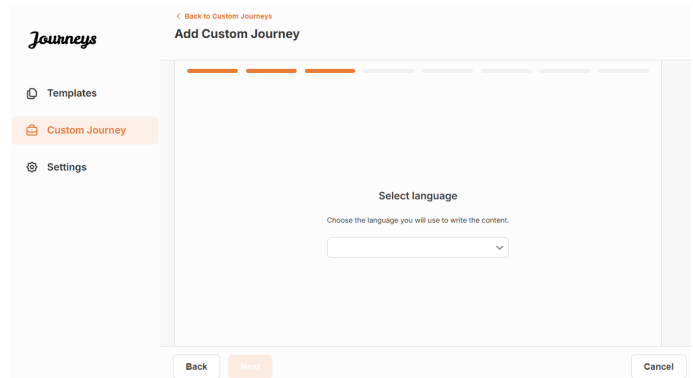

In order to create a Journey that can be shared with multiple children, you simply need to create a Custom Journey with notes disabled from one of the so-called general templates that you have created earlier.

1. Navigate to the "Custom Journey" tab in the side menu.
2. Select "Add Custom Journey"
3. Come up with a distinct/identifiable but appropriate Custom ID for the journey. This Custom ID will serve as a username for the child in the app.

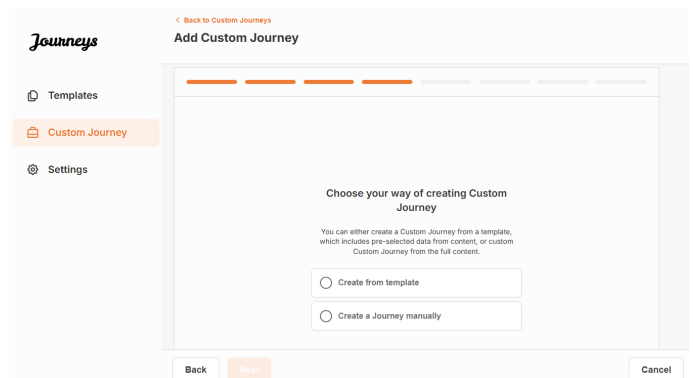

4. Disable notes.

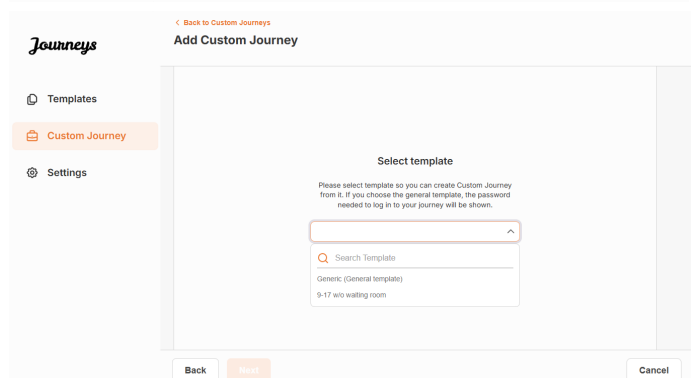

5. Select the language you would like to create the Custom Journey in.

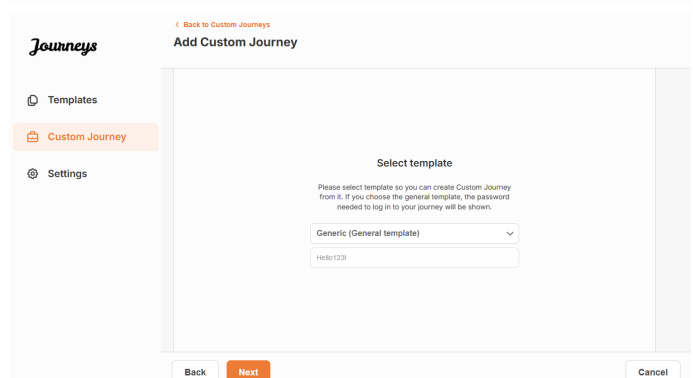

6. Select 'Create from template'

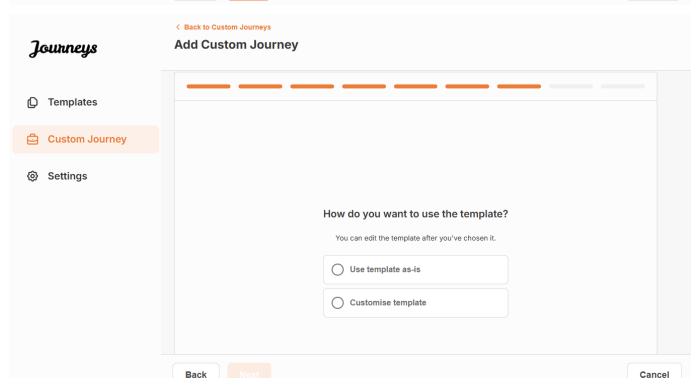

7. Select the general template that you have created – general templates are easily distinguished from other templates as they are marked with '(general template)'

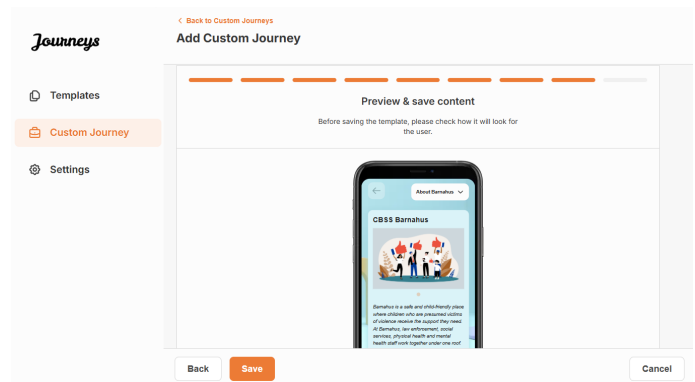

The password for the Journey will be shown to you once you've selected the template.

8. Select "Use template as-is".

You will be automatically redirected to the last step to preview and save the Custom Journey – all information about the Barnahus, rooms and staff will be shown as it is in the template.

Share the Custom ID (which serves as a username) and the password with the child for them to be able to access the generic journey on the mobile app.

Thank you for joining the Journeys app and contributing to a better experience for children visiting Barnahus!

Glossary

Custom ID – The custom ID is like a username. To access the second section, children need a valid Custom ID (and a one-time password). This Custom ID is unique for every Journey and is *linked* to a specific Custom Journey.

Custom Journey – Children entering the second section will have access to their Custom Journey. When the child enters the Custom ID and the password, they will enter a section only available to them. This section is their Custom Journey and includes information about the Barnahus, the rooms, and the staff that they will visit.

Dashboard – The Dashboard is where the Barnahus staff can set up the second section of the app. It is where they can add pictures, text, and other pertinent information about their Barnahus.

Default Language – Translation is available. However, to translate, you first need to add a “Default language”. This is the language you use to write the content. The “Default language” needs to be added before you create any content.

Templates – Instead of creating the same journey several times, you can create a template. Setting up a template is like setting up a Custom Journey, you choose the rooms, staff, and the information you would like to include. After you’ve created a template, you can choose “Create from template” when you’re creating a Custom Journey. This will automatically create the journey for you. The templates are journeys that you can use multiple times without choosing the content all over again.

Here is an example of when it can be useful: Some Barnahus might provide the same journey to multiple children. They would like to show the rooms and the staff working there. Since the rooms and the staff will be the same for all children, they can create ‘generic’ templates. One template can be tailored for younger children and tailored for older children.

Generic Journey – A generic Journey, is a Custom Journey that is not tailored for a specific child, rather it can be shared with multiple children. This can be used if you would like to provide a general introduction to your specific Barnahus, the staff and the rooms without having to make a new Custom Journey for every child.

JOURNEYS: SAFE AND INFORMED JOURNEYS THROUGH BARNAHUS

Worldwide children are exposed to a number of crimes. As much as half of all children globally experience violence each year. The Barnahus model offers a multidisciplinary and integrated approach for authorities and services to respond to child victims. There is a need, however, to strengthen individual advocacy to ensure safeguarding of the child's rights and its' access to child-friendly information and participation in the process.

The overall objective of the JOURNEYS project is to contribute to improving access to child-friendly justice, protection and recovery for child victims and their families through the provision of a safe, informed and participatory pathway through Barnahus from initial report to long-term recovery, with a focus on advocacy for the individual child.
